User Manual

About this Manual

The Manual includes instructions for using and managing the product. Pictures, charts, images and all other information hereinafter are for description and explanation only. The information contained in the Manual is subject to change, without notice, due to firmware updates or other reasons. Please find the latest version in the company website.

Please use this user manual under the guidance of professionals.

Disclaimer

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, THE PRODUCT DESCRIBED, WITH ITS HARDWARE, SOFTWARE AND FIRMWARE, IS PROVIDED "AS IS", WITH ALL FAULTS AND ERRORS, AND OUR COMPANY MAKES NO WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY, SATISFACTORY QUALITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF THIRD PARTY. IN NO EVENT WILL OUR COMPANY, ITS DIRECTORS, OFFICERS, EMPLOYEES, OR AGENTS BE LIABLE TO YOU FOR ANY SPECIAL, CONSEQUENTIAL, INCIDENTAL, OR INDIRECT DAMAGES, INCLUDING, AMONG OTHERS, DAMAGES FOR LOSS OF BUSINESS PROFITS, BUSINESS INTERRUPTION, OR LOSS OF DATA OR DOCUMENTATION, IN CONNECTION WITH THE USE OF THIS PRODUCT, EVEN IF OUR COMPANY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

REGARDING TO THE PRODUCT WITH INTERNET ACCESS, THE USE OF PRODUCT SHALL BE WHOLLY AT YOUR OWN RISKS. OUR COMPANY SHALL NOT TAKE ANY RESPONSIBILITES FOR ABNORMAL OPERATION, PRIVACY LEAKAGE OR OTHER DAMAGES RESULTING FROM CYBER ATTACK, HACKER ATTACK, VIRUS INSPECTION, OR OTHER INTERNET SECURITY RISKS; HOWEVER, OUR COMPANY WILL PROVIDE TIMELY TECHNICAL SUPPORT IF REQUIRED.

SURVEILLANCE LAWS VARY BY JURISDICTION. PLEASE CHECK ALL RELEVANT LAWS IN YOUR JURISDICTION BEFORE USING THIS PRODUCT IN ORDER TO ENSURE THAT YOUR USE CONFORMS THE APPLICABLE LAW. OUR COMPANY SHALL NOT BE LIABLE IN THE EVENT THAT THIS PRODUCT IS USED WITH ILLEGITIMATE PURPOSES.

IN THE EVENT OF ANY CONFLICTS BETWEEN THIS MANUAL AND THE APPLICABLE LAW, THE LATER PREVAILS.

Symbol Conventions

The symbols that may be found in this document are defined as follows.

Symbol	Description	
Danger	Indicates a hazardous situation which, if not avoided, will or could result in death or serious injury.	
Caution	Indicates a potentially hazardous situation which, if not avoided, could result in equipment damage, data loss, performance degradation, or unexpected results.	
i Note	Provides additional information to emphasize or supplement important points of the main text.

1 Introduction

The Guarding Vision mobile client (iOS), is designed for the phone based on iOS 8.0 or later. With the Mobile Client, you can remotely control devices (NVRs, DVRs, network cameras, indoor stations, doorbells, security control panels, the Pyronix devices, the access control devices, etc) via Wi-Fi, 3G, or 4G networks. You can also share your devices to other accounts and use devices shared from other users.

The Mobile Client provides access to the Guarding Vision service, which is a cloud service, to manage your devices.

i Note

Network traffic charges may be produced during the use of the Mobile Client. For details, refer to the local ISP.

System Requirement

iOS 8.0 or later versions.

Conventions

In the following chapters, we simplify Guarding Vision mobile client (iOS) as "Mobile Client", devices such as DVR, NVR, encoder, and network camera as "device", and devices which support being added to Guarding Vision service as "Guarding Vision Device".

2 Select Country or Region at First Time Running

The first time you run the Mobile Client, you should select the region where your devices are located. Otherwise, the live view, playback and alarm notification of the devices will fail.

i Note

- The country or the region cannot be changed once you have selected.
- You should select a correct country or region. Or it may affect subsequent operations.

After running the Mobile Client, tap **Select Country or Region** to select a country or region.

3 Visitor Mode

Visitor mode allows you to manage devices on the Mobile Client without registration. When you log in as a visitor, a visitor account will be created for you automatically, and the account will not change on the same phone.

🕂 Caution

For information security, please use visitor mode cautiously, which is NOT password-protected.

i Note

In visitor mode, you can only manage your devices on a same phone. To avoid this inconvenience, you can register an account. For details about registering account in visitor mode, see **Register** an Account in Visitor Mode.

3.1 Functions in Visitor Mode

Most of the functions supported in a registered account are supported in visitor mode.

Tap **Visitor Mode** on the Home page or the Login page to enter visitor mode.

The followings are the functions supported in visitor mode.

Device Management

Add devices to the Mobile Client and configure device settings. See Add Device for Management and Device Settings for details.

Sharing Device

Tap $\blacksquare \rightarrow$ Scan QR Code to scan the QR code of another visitor account to share device(s) to the account. For details about sharing device, see Share Device.

i Note

To get the QR code of a visitor account, go to $\mathbf{More} \rightarrow \mathbf{Account}$ $\mathbf{Management}$.

Live View and Playback

View live video of the added devices and play back the videos. See *Live View* and *Playback* for details.

Access Control

Control door status and check access control events. See *Access Control* for details.

i Note

You should have added access control devices to the Mobile Client.

Security Control Panel Management

Manage partitions and zones for the security control panel. See *Security Control* for details.

Alarm Configuration

Configure the alarm notifications on Alarm Notification page. See *Alarm Notification* for details.

3.2 Register an Account in Visitor Mode

Though the visitor mode allows you to manage devices without registration, you can only manage your devices on one phone. With a registered account, you can manage devices on different phone.

Steps

- 1. Tap Visitor Mode on the Login page or Home page to enter the visitor mode.
- 2. Tap More → Register an Account to open the Join Us window.
- Tap Terms of Service and Privacy Policy to read the relevant information.
- 4. Tap Agree if you accept our terms of service and privacy policy.
- 5. Register an account by mobile phone number or email address.

i Note

See **Register by Email Address** and **Register by Mobile Phone Number** for details.

4 Registration

You can register an account by your mobile phone number or your email address. With a registered account, you can log in to the Mobile Clients running on different mobile phones, which provides convenience for managing your devices.

i Note

You can use visitor mode to manage your devices without registration. See *Visitor Mode* for details.

4.1 Register by Mobile Phone Number

You can register an account by your mobile phone number.

Steps

- 1. Tap Login on the Home page to enter the Login page.
- 2. Tap Register to enter the Register page.
- 3. Tap Terms of Service and Privacy Policy to read the relevant content and then tap Agree to continue.
- Enter your mobile phone number and then tap Get Security Code to receive the security code for identity verification.
- 5. Enter the security code you received and tap Next to continue.
- 6. Create a password.

i Note

We highly recommend you to create a strong password of your own choosing (using a minimum of 8 characters, including at least three kinds of following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

7. Tap Finish.

4.2 Register by Email Address

You can register an account by your email address.

Steps

- 1. Tap Login on the Home page to enter the Login page.
- 2. Tap Register to enter the Register page.
- Tap Terms of Service and Privacy Policy to read the relevant content and then tap Agree to continue.
- Enter your email address and then tap Get Security Code to get the security code for identity verification.
- 5. Enter the security code you received and then tap Next to continue.
- 6. Create a password.

i Note

We highly recommend you to create a strong password of your own choosing (using a minimum of 8 characters, including at least three kinds of following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

7. Tap Finish.

5 Device Management

You can add devices to the Mobile Client, and configure device functions such as video and image encryption.

5.1 Activate an Inactive Device

When adding a device, if the device is not activated, a window will pop up to ask you to activate the device.

Before You Start

The device and the phone running the Mobile Client should be in the same LAN.

Steps

i Note

For the access control device, you should activate it via other clients (e.g., Guarding Vision client software).

1. Add a device.

i Note

See Add Device for Management for details.

- 2. On the Activate Device page, tap Set Device Password.
- 3. Create a password.

The password strength of the device can be automatically checked. We highly recommend you change the password of your own choosing (using a minimum of 8 characters, including at least three kinds of following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.

- 4. Tap Activate to activate the device.
- 5. Enable DHCP or manually configure network if you enter the Network Configuration page.

5.2 Add Device for Management

You need to add devices to the Mobile Client first so that subsequent operations such as live view and playback can be available. If you want to receive alarm event information from a device, you should add it by scanning QR code or Guarding Vision domain.

i Note

- For details about adding Pyronxi control panel, see Add Pyronix Control Panel to Mobile Client.
- For details about managing alarm event information, see Alarm Notification.

5.2.1 Add an Online Device

The Mobile Client can detect the online devices in the same local area network with your phone, and you can add the detected online devices to the Mobile Client.

Before You Start

Make sure the devices are connected to the same local area network with the phone.

Steps

 On the device list page, tap → Online Device to enter the Online Device page. All detected online devices will be in the list.

2. Select a device for adding.

Figure 5-2 Online Device

i Note

- For network cameras, make sure the device Multicast Discovery function is enabled so that the online network camera can be automatically detected via private multicast protocol in the LAN. For details, see User Manual of the network camera.
- For the inactive device (excluding the access control device), tap Active to create a password for it before you can add the device properly. For more information about the device activation, see Activate an Inactive Device.
- 3. Optional: Edit the network information.
 - 1) Tap 🖊 .
 - 2) Change the device IP address to the same LAN as your phone's by either editing the IP address manually or enabling the device DHCP function.
 - Tap and input the admin password of the device to save the settings.
- 4. Tap Add.
- Enter the required information, including device alias, user name and the password.
- **6.** Tap 🗎 .
- 7. Optional: Delete the device.
 - On the device list, if the list is in list mode, swipe the device name to the left and tap ^(®) → Delete Device.
 - On the device list, if the list is in thumbnail mode, tap the device name or tap …, and then tap **Delete Device**.

5.2.2 Add a Device by Scanning Device QR Code

You can add the device by scanning the device's QR code.

Steps

```
i Note
```

If adding an access control device, you should activate the device and set the device network information via other clients (e.g., Guarding Vision client software) before adding it to this client.

- On the device list page, tap
 → Scan QR Code to enter the Scan QR Code page.
- 2. Scan the QR code.
 - Scan the device QR code by aligning the QR Code with the scanning frame.

- Usually, the QR code is printed on the label, which is on the back cover of the device.
- Tap <u>for</u> to enable the flashlight if the scanning environment is too dark.
- If there are device QR codes in photo album of the phone, tap I to extract QR code from local album.
- 3. Optional: Perform the following operations if the following situations occur.
 - If the system fails to recognize the QR code, tap do add the device manually. See Add a Device by Guarding Vision Domain or Add a Device by IP/Domain for details.
 - If the device has been added to another account, you should unbind the device from the account first. See Unbind Device from Its Original Account for details.
 - If the device is offline, you should connect a network for the device. For details, see *Connect Offline Device to Network* for details.
 - If the device is not activated, the Activate Device page will pop up (excluding the access control device). You should activate the device. For details, see *Activate an Inactive Device* for details.
 - If the Guarding Vision service is disabled for the device, you should enable the function (excluding the access control device). For details, see *Enable Guarding Vision Service When Adding Device on Mobile Client* for details.
- 4. Tap Add on the Result page.
- 5. Enter the device verification code.

The device will be added successfully.

i Note

- The default device verification code is usually on the device label. If no verification code found, enter the device verification code you created when enabling Guarding Vision service.
- For details about enabling Guarding Vision service, see Enable Guarding Vision Service for Device.
- 6. Optional: Tap Configure DDNS to configure DDNS.

i Note

- See Set DDNS for details.
- After DDNS being enabled, the device will be accessed via IP address in priority, so that remote configuration of the device will be supported and the streaming speed will be faster than streaming via Guarding Vision service.
- If you skip this step, the device will be accessed via Guarding Vision service.

7. Tap Finish.

- 8. Optional: Delete the device.
 - On the device list, if the list is in list mode, swipe the device name to the left and tap ⁽⊗ → Delete Device.
 - On the device list, if the list is in thumbnail mode, tap the device name or tap …, and then tap **Delete Device**.

5.2.3 Add a Device by IP/Domain

You can add the device by fixed IP address or domain name. The streaming speed of devices added by IP/domain is faster than those added by Guarding Vision domain.

Before You Start

- If you want to add the access control device, activate it before adding. See the user manual of the access control device for details.
- You should activate it via other clients such as Guarding Vision client software. Make sure the device is powered on.

Steps

i Note

The Mobile Client doesn't support receiving alarm event information from devices added by IP/domain. For details about managing event information on the Mobile Client, see *Alarm Notification*

- 1. Tap 🖶 and select Manual Adding.
- 2. Select IP/Domain as the adding type.
- Enter the required information, such as alias, address, user name, camera No. and device password.
 Address

Device IP address or domain name.

Camera No.

The number of the camera(s) under the device can be obtained after the device is successfully added.

4. Tap 🛅 to add the device.

i Note

- If the device is offline, you should connect the device to a network. For details, see Connect Offline Device to Network.
- If the device is not activated, the Activate Device page will be popped up (exclude the access control device). You should activate the device. For details, see Activate an Inactive Device.
- 5. Optional: Perform the following operations after adding the device.

Edit Device Information	On the Device Information page, tap 🖉 to
Information	edit the basic information of the device.
Star Live View	Tap Start Live View to view the live view of the device.
Delete a Device	Tap $\ensuremath{\boxdot}$ and then tap $\ensuremath{\textbf{Delete}}$ to delete the device.
Configure Device Parameters	Tap \bigcirc and then tap Remote Configuration to remotely configure device parameters such as basic information, time settings, recording schedule, etc. See Remotely Configure Device for details.

Remote Controller Tap [⊕] and then tap Remote Controller to remotely control the device. See **Use Mobile Client as Device's Remote Controller** for details.

5.2.4 Add a Device by Guarding Vision Domain

For devices which support Guarding Vision service (a cloud service), you can add them manually by Guarding Vision domain.

Before You Start

- Make sure the device is powered on.
- If adding access control device, you should activate the device and set the device network information via other clients (e.g., Guarding Vision client software) before adding it to this client.

Steps

- On the device list page, tap
 → Manual Adding to enter the Add Device page.
- 2. Select Guarding Vision Domain as the adding type.
- 3. Enter the device serial No. manually.

i Note

- By default, the device serial No. is on the device label.
- For the video intercom devices, when entering the serial No. of the indoor station, the corresponding door station will also be added to the Mobile Client automatically.
- An indoor station can be linked to multiple door stations.
- 4. Tap 🛅 to search the device.

i Note

- If the device has been added to another account, you should unbind the device from the account first. See Unbind Device from Its Original Account for details.
- If the device is offline, you should connect a network for the device. For details, see *Connect Offline Device to Network* for details.
- If the device is not activated, the Activate Device page will pop up (excluding the access control device). You should activate the device. For details, see *Activate an Inactive Device* for details.
- If Guarding Vision service is disabled for the device, you should enable the function (excluding the access control device). For details, see *Enable Guarding Vision Service When Adding Device on Mobile Client* for details.
- 5. Tap Add on the Result page.
- Enter the device verification code.
 The device will be added successfully.

i Note

• The default device verification code is usually on the device label. If no verification code found, enter the device

verification code you created when enabling Guarding Vision service.

- For details about enabling Guarding Vision service, see Enable Guarding Vision Service for Device.
- 7. Optional: Tap Configure DDNS to configure DDNS.

i Note

- See Set DDNS for details.
- After DDNS being enabled, the device will be accessed via IP address in priority, so that remote configuration of the device will be supported, and the streaming speed will be faster than streaming via Guarding Vision service.
- If you skip this step, the device will be accessed via Guarding Vision service.

8. Tap Finish.

- 9. Optional: Delete the device.
 - On the device list, if the list is in list mode, swipe the device name to the left and tap ^(®) → Delete Device.
 - On the device list, if the list is in thumbnail mode, tap the device name or tap …, and then tap **Delete Device**.

5.3 Connect Offline Device to Network

When adding a device to the Mobile Client, if the device is offline, you should connect the device to a network first. The Mobile Client provides the following four methods for connecting offline devices to networks.

i Note

For access control device, you should connect it to a network via other Clients (e.g., Guarding Vision client software).

Connecting to Wired Network

Using this method if a router is available for the device to connect to.

i Note

Make sure the device is powered on.

Connecting to Wireless Network

Use this method if a wireless network is available for the device to connect to. "Device" here excludes wireless doorbell, wireless security control panel, and Mini Trooper (a kind of battery camera).

i Note

- Make sure your phone has connected to a Wi-Fi network before using the method.
- The device should support connecting to wireless network.

Connecting to Network by Wi-Fi Configuration

You can use this method to connect wireless doorbell to the network by using the doorbell to scan the QR code generated by the Mobile Client.

Tap **Connect to a Network** on the Result page and then follow the instructions on the subsequent pages to connect the device to the network.

Connecting to Network by Access Point

In the Mobile Client, Access Point (AP) refers to a networking hardware device (e.g., wireless doorbell or wireless security control panel), which can provide a Wi-Fi network for the phone to connect to.

i Note

You should have turned on WLAN in the phone's operation system.

Tap **Connect to a Network** on the Result page, select **Wireless Connection** as the connection type, and then follow the instructions on the subsequent pages to complete the connection process.

5.4 Enable Guarding Vision Service for Device

Guarding Vision is a cloud service . When adding a device via Guarding Vision Domain or scanning QR code, the service should be enabled. You can enable the service via the Mobile Client, the device web page, or Guarding Vision client software. This section introduces how to enable the service via the former two methods.

5.4.1 Enable Guarding Vision Service When Adding Device on Mobile Client

When adding a device via Guarding Vision domain or scanning QR code, if the Guarding Vision service is not enabled for the device, the Enable Guarding Vision Service window will pop up to remind you to enable the service first.

Perform the following task to enable the Guarding Vision service in this case.

Steps

1. Add a device via Guarding Vision domain or scanning QR code.

i Note

See Add a Device by Guarding Vision Domain or Add a Device by Scanning Device QR Code for details.

If the device's Guarding Vision service is not enabled, the following window pops up.

Figure 5-3 Enable Guarding Vision Service

- 2. On the Enable Guarding Vision Service window, tap Guarding Vision Terms of Service to read the terms of service.
- 3. Check Read and Agree Guarding Vision Terms of Service.
- 4. Tap Next.
- 5. Create a device verification code.

You can change the device verification code. See *Change Device's Verification Code* for details.

6. Tap Enable Guarding Vision Service.

What to do next

Continue the process for adding the device. See *Add a Device by Guarding Vision Domain* or *Add a Device by Scanning Device QR Code* for details.

5.4.2 Enable Guarding Vision Service on Device Web Page

You can enable Guarding Vision service for a device on the device web page.

Steps

- 1. Visit the device IP address on the web browser.
- 2. Enter the device user name and device password to log in to the device web page.
- 3. Tap Configuration → Network → Advanced Settings → Platform Access to enter the Platform Access page.

		Live View F	layback	Picture	Application	Configuration
,	🖵 Local	SNMP FTP E	nai Platform	Access HTTPS	QoS 802.13	
	System	2 Enable

1	Event Event		combinat or numbe	on of no less than 8 le rs.	ters	
1	Storage					
1	Counting	🗄 Save				

Figure 5-4 The Platform Access Page

4. Check Enable.

The system will set Guarding Vision as the platform access mode by default.

- **5. Optional:** If it is the first time to enable the Guarding Vision service, create a device verification code.
- 6. Tap Save.

5.5 Enable DHCP Function on Device Web Page

You can enable DHCP by following the steps below to allow allocating DNS address automatically.

Steps

i Note

If you want to enable the access control device's DHCP function, you should enable it via other systems (e.g. Guarding Vision client software).

- 1. Visit the IP address of the device.
- Enter the device user name and device password and log in to the device's web page.
- Click Configuration → Network → Basic Settings to enter the Basic Settings page.
- 4. Enable DHCP.

DNS address will be allocated automatically.

5. Click Save.

5.6 Unbind Device from Its Original Account

When adding a device by scanning QR code or Guarding Vision domain, if the result shows that the device has been added to another account, you should unbind it from the account before you can add it to your account.

Before You Start

Make sure the device and the phone running the Mobile Client are in the same local area network.

Steps

1. Add the device by scanning QR code or Guarding Vision domain.

See Add a Device by Scanning Device QR Code or Add a Device by Guarding Vision Domain for details.

On the Result page, tap Unbind Device to start unbind the device from its account.

- **3. Optional:** If the network exception occurs, perform the following operations.
 - Tap Connect to Wi-Fi to connect the phone to the Wi-Fi network and make sure the device is in the same local area network with the phone.
 - Tap Or you can unbind the device from its account in local GUI to unbind the device via local GUI.

Unbinding the device via local GUI should be supported by the device.

- On the Unbind Device page, enter the device password and the verification code displayed on the image.
- 5. Tap Finish.

5.7 Device Settings

On Settings page, you can view and edit a device's basic information, delete the device, and configure other functions such as video and image encryption, changing device verification code, transferring the device to another user, etc.

5.7.1 Edit Information of Cameras Linked to Added Device

For cameras linked to NVR/DVR, you can edit their names, and hide or show them in the device list.

Steps

- 1. Enter the Settings page of a NVR or DVR.
 - On the device list page, if the page is in list mode, swipe the device name to the left and tap 🕲 .
 - On the device list page, if the page is in thumbnail mode, tap the device name or tap *** .
 - On the Live View page. Tap •••• and then tap Settings.

i Note

For details about how to enter the Live View page, see *Start* and *Stop Live View*.

2. Tap Linked Camera to enter the Linked Camera page.

Edit Camera Name	Tap 💆 to edit the camera name, and then tap 🔚 to save the settings.	
Hide/Show Camera	Tap [©] or w to hide or show the camera on the device list respectively.	

5.7.2 Set Video and Image Encryption

For security reasons, you can set the video and image encryption function to encrypt the videos or the pictures.

Steps

i Note

- If you set the video and image encryption function, the device's live video, recorded video, and pictures in event information will be encrypted. You should enter the device verification code the first time you entering these pages.
- If you log in to the Mobile Client with the same account on another phone, you should enter the device verification code

again to view the live video, the recorded video, and pictures in event information.

- 1. Enter the Settings page.
 - On the device list page, if the page is in the list mode, swipe the device name to left and tap 🕲 .
 - On the device list page, if the page is in the thumbnail mode, tap the device name or tap … .
 - Enter the Live View page, tap •••• and tap Settings.
- 2. Set the Video and Image Encryption switch to ON to enable the function.
- **3. Optional:** Change the encryption password (device verification code).

1) Tap Change Password.

- Tap Edit in the pop-up window to enter the Change Password page.
- 3) Follow the instructions on the page to change the device verification code.

i Note

The default device verification code is usually on the device label. If no verification code found, enter the device verification code you created when enabling Guarding Vision service. For details about enabling Guarding Vision service, see Enable Guarding Vision Service for Device.

5.7.3 Set DDNS

For a device added via Guarding Vision Domain or Scaning QR code, if DDNS is enabled, the device's streams will be accessed via IP address in priority. In this case, you can remotely configure device and the speed of streaming will be faster than that of streaming via Guarding Vision service.

Steps

- 1. Enter the Settings page of the device.
 - On the device list page, if the page is in list mode, swipe the device's name to the left and tap 🕲 .
 - On the device list page, if the page is in thumbnail mode, tap the device's name or tap
 - On the Live View page. Tap and then tap Settings.

i Note

For details about how to enter the Live View page, see *Start* and *Stop Live View*

- On the Settings page, tap Configure DDNS to enter the Configure DDNS page.
- Set the required information.
 Device Domain Name

The default device domain name is the serial number of the device. If you want to edit it, the edited domain name should contain 1 to 64 characters, including numbers, lowercase letters, and dashes. And it should start with a lowercase letter and cannot end with a dash.

Port Mapping Mode

For details about setting port mapping, tap **How to Set Port Mapping**.

i Note

The entered port number should be from 1 to 65535.

User Name

Enter the device user name.

Password

Enter the device password.

4. Tap 🛅 .

5.7.4 Change Device's Verification Code

The device verification code is used for verifying user identity, as well as encrypting a device's videos (including live videos and recorded video files) and captured pictures. You can change the device verification code for the network camera and Mini Trooper (a kind of camera powered by battery).

Steps

i Note

For details about how to encrypt a device's videos and captured pictures, see *Set Video and Image Encryption*.

- **1.** Enter the Settings page of the device.
 - On the device list page, if the page is in the list mode, swipe the device name to the left and tap 🕲 .
 - On the device list page, if the page is in thumbnail mode, tap the device name or tap … .
 - On the Live View page, tap •••• and then tap Settings.

i Note

For details about how to enter the Live View page, see *Start* and *Stop Live View*.

- 2. Tap Change Verification Code, and then tap Edit on the pop-up Window to enter the Change Verification Code page.
- 3. Enter the old verification code, and then tap Next.
- 4. Create a new verification code, and then confirm it.

i Note

If you have enabled the Video and Image Encryption function, new pictures and videos will be encrypted by the new verification code. However, the earlier encrypted pictures and videos still use the old verification code.

5.7.5 Set Volume for Video Intercom

You can set video intercom volume as required.

Steps

i Note

Only video intercom devices support this function.

1. Enter the Settings page of a video intercom device.

- On the device list page, if the page is in list mode, swipe the device name to the left and tap 🕲 .

- On the device list page, if the page is in thumbnail mode, tap the device name or tap … .
- On the Live View page, tap •••• and then tap Settings.

For details about how to enter the Live View page, see *Start* and *Stop Live View*.

2. Tap Loudspeaker Volume or Microphone Volume to adjust the loudspeaker and the microphone volume respectively.

5.7.6 Use Mobile Client as Device's Remote Controller

For a device added via IP/Domain, you can use the Mobile Client as the device's remote controller.

Steps

i Note

- The function should be supported by the device.
- The remote controller function is supported when your phone is connected to a Wi-Fi network, and the network latency should be less than 200ms.

1. Enter the Settings page.

- On the device list page, if the page is in the list mode, swipe the device name to the left and tap \Im .
- On the device list page, if the page is in thumbnail mode, tap the device's name or tap
- On the Live View page. Tap and then tap Settings.

i Note

For details about how to enter the Live View page, see *Start* and *Stop Live View*.

2. Tap \odot and tap **Remote Controller** to enter the following page.

Figure 5-5 Remote Controller Page

- Swipe the screen to perform remote-control operations such as moving up, down, left, and right.
- 4. Tap the screen to confirm.
- Optional: Tap D to cancel and return to the previous menu of the device.
- 6. Optional: Tap 🗏 to open the main menu of the device.

5.7.7 Remotely Configure Device

After adding a device, you can set the parameters of the device, including basic information, time settings, recording schedule, etc.

View and Edit Basic Information

You can view and edit the basic information of a device.

Before You Start

Add a device to the Mobile Client. See *Add Device for Management* for details.

Steps

1. Enter the Settings page.

- On the device list page, if the page is in list mode, swipe the device name to the left and tap 🕲 .
- On the device list page, if the page is in thumbnail mode, tap the device name or tap *** .
- On the Live View page, tap ---- and then tap Settings.

i Note

For details about how to enter the Live View page, see *Start* and *Stop Live View*.

- 2. Enter the Remote Configuration page.
 - For a device added via IP/Domain, tap $\odot \rightarrow$ Remote Configuration .

For details about adding device via IP/Domain, see Add a Device by IP/Domain.

 For a device added via other methods, tap Remote Configuration on the Settings page.

i Note

You should have configured DDNS for the device first. See *Set DDNS*.

- 3. Tap Basic Information to enter the Basic Information page.
- 4. Tap 💋 to enter the Edit Device page.
- 5. Edit the basic information of the device.

6. Tap 🛅 to save the settings.

Set Recording Schedule

You can set a recording schedule for a channel of a specific device.

Before You Start

Add a device to the software. See for details.

Perform this task if you need to set recording schedule for a channel of an added device.

Steps

- 1. Tap 🖲 and tap **Devices** to enter the Device Management page.
- 2. Tap an added device to enter the Device Information page.
- Tap
 [⊕] and tap Remote Configuration to enter the Remote Configuration page.
- 4. Tap Recording Schedule to enter the Recording Schedule page.
- 5. Select a channel if the device has multiple channels.
- Set O to enable recording schedule.
- 7. Set a recording schedule for a day in the week.

1) Tap a day in the week to open the following page.

¢	Monday	
Continuous	00:00 - 00:00	>
Continuous	00:00 - 00:00	>
Continuous	00:00 - 00:00	>

Figure 5-7 Time Period Settings

Continuous

The video will be recorded automatically according to the time of the schedule.

Motion Detection

The video will be recorded when the motion is detected.

Alarm

The video will be recorded when the alarm is triggered via the external alarm input channels.

Motion Detection or Alarm

The video will be recorded when the external alarm is triggered or the motion is detected.

Motion Detection and Alarm

The video will be recorded when the motion and alarm are triggered at the same time.

Event

The video will be recorded when any event is detected.

i Note

You can also set the recording type as detailed event type, which should be supported by the device. For details, refer to the user manual of the device.

- 3) Tap **OK** to save the settings of the time period.
- 4) Set other time periods in the day.

i Note

Up to 8 time periods can be configured for each day. And the time periods cannot be overlapped with each other.

Figure 5-9 Recording Schedule

Configure Time Settings

You can select the time zone and set the time synchronization mode to Manual or NTP mode for the added device.

Steps

- 1. Enter the Settings page of the device.
 - On the device list page, if the page is in list mode, swipe the device name to the left and tap 🕲 .
 - On the device list page, if the page is in thumbnail mode, tap the device name or tap ***.
 - On the Live View page, tap and then tap Settings.

For details about how to enter the Live View page, see *Start* and *Stop Live View*.

- 2. Enter the Remote Configuration page.
 - For a device added via IP/Domain, tap
 → Remote
 Configuration .

i Note

For details about adding devices via IP/Domain, see *Add a Device by IP/Domain*.

 For a device added via other methods, tap Remote Configuration on the Settings page.

i Note

You should have configured DDNS for the device first. See *Set DDNS*.

- 3. Tap Time Configuration to enter the Time Configuration page.
- Select the time zone in which the device locates. The device time will be adjusted automatically.
- 5. Select the time synchronization mode.
 - Select NTP Synchronization. And then set the interval for synchronizing the device time with the NTP server.
 NTP Synchronization

Synchronize time at a specific interval with the NTP server.

i Note

For details about setting the NTP server details, refer to the user manual of the device.

- Select Manual Synchronization. And then tap Synchronize with Phone to synchronize the device time with the OS (Operation System) time of your phone.
- 6. Tap 🧾 to save the settings.

Change Device Password

You can change the password of a device via the Mobile Client.

Steps

- 1. Enter the Settings page of the device.
 - On the device list page, if the page is in list mode, swipe the device's name to the left and tap 0 .
 - On the device list page, if the page is in thumbnail mode, tap the device's name or tap *** .
 - On the Live View page, tap ---- and then tap Settings.

i Note

For details about how to enter the Live View page, see *Start* and *Stop Live View*.

- 2. Enter the Remote Configuration page.
 - For a device added via IP/Domain, tap
 → Remote
 Configuration .

i Note

For details about adding device via IP/Domain, see **Add a Device by IP/Domain**.

- For a device added via other methods, tap **Remote Configuration** on the Settings page.

i Note

You should have configured DDNS for the device first. See Set DDNS.

- 3. Tap Change Password to enter the Change Password page.
- 4. Enter the old password of the device
- 5. Create a new password.

Caution

The password strength of the device can be automatically checked. We highly recommend you change the password of your own choosing (using a minimum of 8 characters, including at least three kinds of following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.

6. Confirm the password.

7. Tap 🥅 to save the changes.

Configure Normal Event

You can enable a device's normal event such as motion detection, video tampering alarm, video loss alarm, for the channels of the device.

Steps

1. Enter the Settings page.

- On the device list page, if the page is in list mode, swipe the device name to the left and tap 🕲 .
- On the device list page, if the page is in thumbnail mode, tap the device name or tap ··· .
- On the Live View page, tap •••• and then tap Settings.

i Note

For details about how to enter the Live View page, see *Start* and *Stop Live View*.

- 2. Enter the Remote Configuration page.

i Note

For details about adding device via IP/Domain, see Add a Device by IP/Domain

 For a device added via other methods, tap Remote Configuration on the Settings page.

____i Note

You should have configured DDNS for the device first. See *Set DDNS*.

3. Tap Normal Event to enter the Normal Event page.

- 4. Optional: Select a channel if the device has multiple channels.
- 5. Set the switch(es) to ON to enable the event(s).

Configure Smart Event

You can enable the smart event for the channels of a device, including audio exception detection, face detection, and intrusion detection, etc.

Steps

i Note

The supported event types of smart event vary according to different devices.

- 1. Enter the Settings page.
 - On the device list page, if the page is in list mode, swipe the device name to the left and tap 🕲 .
 - On the device list page, if the page is in thumbnail mode, tap the device name or tap … .
 - On the Live View page, tap •••• and then tap Settings.

i Note

For details about how to enter the Live View page, see *Start* and *Stop Live View*.

- 2. Enter the Remote Configuration page.
 - For a device added via IP/Domain, tap ⊕ → Remote Configuration .

i Note

For details about adding device via IP/Domain, see *Add a Device by IP/Domain*.

For a device added via other methods, tap Remote
 Configuration on the Settings page.

i Note

You should have configured DDNS for the device first. See *Set DDNS* for details.

- 3. Tap Smart Event to enter the Smart Event page.
- 4. Optional: Select a channel if the device has multiple channels.
- 5. Set the switch(es) to ON to enable event(s).

Enable Temperature Measurement

You can enable the temperature measurement function for the thermal camera on the Mobile Client.

Steps

i Note

This function is only available to the thermal camera.

1. Enter the Settings page.

- On the device list page, if the page is in list mode, slide the device name to the left and tap 🕲 .
- On the device list page, if the page is in thumbnail mode, tap the device name or tap … .
- On the Live View page, tap •••• and then tap Settings.

For details about how to enter the Live View page, see *Start* and *Stop Live View*.

- 2. Enter the Remote Configuration page.
 - For a device added via IP/Domain, tap
 → Remote
 Configuration .

i Note

For details about adding device via IP/Domain, see *Add a Device by IP/Domain*.

 For a device added via other methods, tap Remote Configuration on the Settings page.

i Note

You should have configured DDNS for the device first. See *Set DDNS*.

- Tap Temperature Measurement to enter the Temperature Measurement page.
- 4. Optional: Select a camera if camera(s) are linked to the device.
- 5. Set the switch to ON to enable temperature measurement.

5.8 Upgrade Device Firmware

For a device added via IP/Domain, its new version can be detected by the Mobile Client. Once detected, you can upgrade the device to its latest version.

Steps

- 1. Enter the Device Information page.
 - On the device list page, if the page is in the list mode, swipe the device name to the left and tap ⁽²⁾.
 - On the device list page, If the page is in thumbnail mode, tap the device name or tap *** .
 - On the Live View page. Tap and then tap Settings.

i Note

For details about how to enter the Live View page, see *Start* and *Stop Live View*.

- 3. Tap Upgrade and then tap UPGRADE on the pop-up window.

The Mobile Client will download the upgrade file first and then start upgrading the device.

i Note

You can also enable the Mobile Client to automatically download the upgrade file in Wi-Fi networks once a new device version is detected. For details, see *Auto-Download Upgrade File*.

5.9 Transfer Device to Others

You can transfer the devices in your account to another person's account. After that, the transferred device will be unavailable for you, and the target account will have all the configuration and operation permissions of the devices.

Steps

- 1. Enter the Settings page in one of the following ways.
 - On the device list page, if the page is in list mode, swipe the device name to the left and tap ⁽³⁾.
 - On the device list page, if the page is in thumbnail mode, tap the devices name or tap … .
 - Enter the Live View page, tap and then tap Settings.

2. Tap Transfer Device → Transfer .

A security code for verify your identity will be sent to your registered mobile phone number or email address.

- 3. Enter the received security code, and then tap Next.
- 4. Set the target account's information.
 - Enter the target account's user name, mobile phone number, or e-mail address, and then tap Confirm.
 - Tap 🗄 to scan the target account's QR code and then tap **Confirm**.

The Device Verification Code window pops up.

Enter the device verification code and then tap Confirm to complete device transfer.

i Note

The default device verification code is usually on the device label. If no verification code found, enter the device verification code you created when enabling Guarding Vision service.

6 Favorites Management

You can add the frequently-used camera(s) to the favorites so that you can access them conveniently.

6.1 Add Cameras to Favorites on Device List Page

On the device list page, you can add the frequently-used camera(s) to the favorites so that you can access them conveniently.

Steps

- On the device list page, tap 1.
- 2. Tap Add to Favorites.
- 3. Select devices and cameras on the Select Camera page.
- 4. Tap OK.
- 5. Create a name for the Favorites and then tap OK.

i Note

- Up to 32 favorites can be added.
- The favorites name should be no more than 32 characters.

The added Favorites will be displayed on the device list page.

6. Optional: Tap the Favorites name on the device list page to view the cameras' live videos.

6.2 Add Cameras to Favorites During Live View

On the live view page, you can add frequently-used cameras to Favorites so that you can access them conveniently

Steps

1. Enter the Live View page.

i Note

For details about how to enter the Live View page, see Start and Stop Live View

2. Tap and tap Add to Favorites.

- 3. Add cameras to favorites.
 - Create a new favorites in the pop-up window and tap OK.
 - Add to existing favorites.

Tap Add to Existing Favorites in the pop-up window.

Select a Favorites folder in the list.

i Note

- Up to 32 Favorites can be added.
- The favorites name should be no more than 32 characters.
- Optional: Tap the Favorites on the device list page to view the cameras' live videos.

6.3 Remove Cameras from Favorites

You can delete cameras in the favorites.

Steps

1. Enter the Edit Favorites page.

- On the device list page, if the page is in list mode, swipe the Favorites name to the left and tap ⁽²⁾.
- On the device list page, if the page is in thumbnail mode, tap ... of the Favorites.
- 2. Tap a camera that need to be deleted.
- 3. Tap Confirm in the pop-up window to delete the camera.

7 Share Device

You can share devices to other users. After that, they can access the devices according to the permissions you configured for them. You can also receive devices shared by other users.

7.1 Select Device(s) and Share to Specified Account

You can select device(s) first and then share them to a specified account.

Steps

1. Select the device and then enter the Recipient page.

- Option 1 Tap to display the device list page in list mode.
 Swipe the target device's name to the left, and then tap [∞].
- Option 2 Enter the Live View page.

For details about how to enter the Live View page, see *Start and Stop Live View*.

- Option 3 For security control panel, tap the device on device list page to enter the device details page and then tap 🖼.
- 2. Set the account that you want to share device with.

Add a Recipient Enter the email address or the mobile phone number. Image:	Manually Add a Recipient	ap Add Recipient.

- **3. Optional:** If you are sharing a device linked with multiple cameras, select the camera(s) that need to be shared.
- 4. Optional: Enter a remark about this sharing.

i Note

Only you can view the remark content while the account you shared with can not.

5. Optional: Add more device(s) for sharing.

Tap + and then select more device(s) for sharing.

i Note

For devices linked with multiple cameras, you can select camera(s) for sharing.

2) Tap 🔚 to save the settings.

Example

If you select Live View, Remote Playback, and PTZ, the recipient will have the permissions to view live video and the recorded video files of the device, as well as perform PTZ control to the device.

- 6. Configure permissions for the to-be-shared device(s).
 - Check **All Permissions** on the Sharing Details page to select all the permissions.
 - Tap the device displayed on the Sharing Details page, and then select permission(s) and tap
- 7. Tap Finish.

A dialog about the sharing will pop up on the recipient's Mobile Client. He or she can accept or reject the shared device.

 Optional: Delete the recipient account and all the sharing information.

Go to More → Manage Sharing Settings .

2) Tap the account and then tap Delete.

7.2 Select an Account and Share Specified Devices to It

You can select an account and share specified devices to it.

Steps

- On the More page, tap More → Manage Sharing Settings to enter the Manage Sharing Settings page.
- Tap on to enter the Recipient page.
- 3. Set the account that you want to share device(s) with.

i Note

The mobile phone number should contain the country code. For example, if the country code is 1 and the mobile phone number is 209566XX54. You should enter 1209566XX54.

€ap **v** to add account to the list.

Belect the account from the account list and then tap Next.

Add	🖬 क्व नि on the Recipient page to scan the QR
Recipient by	code of the target account.
Scanning QR	The account will be listed on the account list.
Code	

Go to More \rightarrow Account Management \rightarrow My QR Code to get the QR code of your account.

Select the account from the account list and than tap Next.

Select a	Select a history account from the account list
History	if you have added account(s) before, and
Account	then tap Next .

4. Optional: Enter a remark about this sharing.

i Note

Only you can view the remark. The user of account you shared with can not.

5. Select device(s).

i Note

For devices linked with multiple cameras, you can select camera(s) for sharing.

- 6. Configure permissions for the to-be-shared device(s).
 - Check All Permissions on the Sharing Details page to select all the permissions.
 - Tap the device displayed on the Sharing Details page, and then select permission(s) and tap

Example

For example, if you select Live View and Remote Playback, the recipient will have the permissions to view live video and play back the video footage of the device.

7. Tap Finish to finish sharing.

A dialog about the sharing will pop up on the recipient's Mobile Client. He or she can accept or reject the shared device.

- Optional: Delete the recipient account and all the sharing information.
 - Go to More → Sharing Settings .
 - 2) Tap the account and then tap Delete.

8 Live View

You can view live video of the devices' connected cameras. And some basic operations are supported during live view, including picture capturing, manual recording, PTZ control, etc.

8.1 Start and Stop Live View

Live view shows you the live video getting from cameras. Perform the following task to start and stop live view.

Steps

- 1. Enter the Live View page to start live view.
 - On the device list page, if the device list is displayed in thumbnail mode, tap the device thumbnail to enter the Live View page.

i Note

You can tap \blacksquare or \blacksquare on the device list page to switch between the list mode and the thumbnail mode.

 On the device list page, if the device list is displayed in list mode, and the Floating Live View function is enabled, tap one or more devices to open the floating windows. And then tap the floating window to enter the Live View page.

 For details about enabling or disabling the Floating Live View function, see *Floating Live View*.

Up to 256 cameras can be selected.

- On the device list page, if the device list is displayed in list mode, and the Floating Live View function is disabled, tap the device to enter the Live View page.
- If the Video and Image Encryption function is disabled, the live video will start playing automatically.
- If the Video and Image Encryption function is enabled, you should enter the device verification code before the live video starting playing.

i Note

- For details about Video and Image Encryption function, see Set Video and Image Encryption.
- The default device verification code is usually on the device label. If no verification code found, enter the device verification code you created when enabling Guarding Vision service.
- The live video from the video intercom device lasts 5 minutes.
- Up to 6 users can view the live video of a same door station simultaneously. If the upper-limit is reached, other users can only use the audio function of the door station.
- 2. Optional: Perform the following operations.

View Full Screen Live Video	Rotate the phone to view live video in full screen mode.	
Switch Camera	Swipe the live view page to the left or right to switch camera and view its live video.	
Reselect Device for Live View	Tap ⊠ to go back to the device list. Beselect cameras and then tap OK.	
	You can select up to 256 cameras.	
Switch to Playback	Tap \longrightarrow Playback to switch to playback.	

For details about playback, see Playback.

- 3. Stop live view of a camera.
 - 1) Press and hold a window under live view.
 - Drag the window upwards to the appearing at the top of the page.

8.2 Set Window Division

You can adjust window division in different scenarios.

Tap 1, 4, 9, 12, or 16 to set the window division mode to 1-window, 4-window, 9-window, 12-window, or 16-window respectively.

If the added camera number is more than the window division number, you can swipe to the left or right to change the window division group on the current page.

8.3 Digital Zoom

Digital zoom adopts encoding technology to enlarge the image which will result in image quality damage. You can zoom in or zoom out the live video image as desired.

Tap 🖾 to zoom in or zoom out the image.

Or spread two fingers apart to zoom in, and pinch them together to zoom out.

8.4 PTZ Control

PTZ is the acronym of "Pan, Tilt, and Zoom". The Mobile Client provides PTZ control for cameras with pan/tilt/zoom functionality. You can set presets, patrols and patterns for the cameras on the PTZ control panel.

i Note

PTZ control should be supported by the camera.

8.4.1 Pan and Tilt a Camera

The Mobile Client allows you to pan and tilt a camera's view.

Steps

1. Start live view of a camera supports PTZ control.

i Note

For details about how to start live view, see *Start and Stop Live View*.

2. Select a live view window on the Live View page.

3. Tap 🔯 to open the PTZ Control panel.

Figure 8-1 PTZ Conrol Panel

4. Tap Pan and Tilt.

5. Drag the circle button at the center of the PTZ Control panel to pan and tilt the camera.

8.4.2 Set a Preset

A preset is a predefined image position which contains configuration parameters for pan, tilt, zoom, focus and other parameters. You can also set a virtual preset after enabling digital zoom. After you set a preset, you can call the preset and then the camera will move to the programmed position.

Steps

 Pan and tilt a camera to move the camera direction to a desired position.

See Pan and Tilt a Camera for details.

In the PTZ Control panel, tap Add Preset to open the following window.

Figure 8-2 Set a Preset

3. Swipe the number up or down to set the preset No.

i Note

The preset No. should be between 1 and 256.

- 4. Tap Set to complete setting the preset.
- 5. Tap Call to call the preset.
- 6. Optional: Tap Delete to delete the preset.

8.4.3 Adjust PTZ Speed

You can adjust the PTZ speed.

Steps

- 1. Start live view of a camera which supports PTZ control.
- 2. Tap to open the PTZ control panel.
- 3. Tap More → to open the PTZ speed panel.
- 4. Drag the slider to adjust the PTZ speed.

8.5 Start Two-Way Audio

Two-way audio function enables the voice talk between the Mobile Client and devices. You can get and play not only the live video but also the real-time audio from the devices, and the devices can also get and play the real-time audio from the Mobile Client.

Steps

```
i Note
```

- The function should be supported by the device.
- The devices added by Guarding Vision domain or by scanning QR code do not support this function.
- 1. Start live view of the device.

i Note

See Start and Stop Live View for details.

- 2. Tap I in the toolbar to turn on the two-way audio.
- If the device is a NVR, select the device or its linked network camera as the two-way audio channel.

i Note

If not, skip this step.

- If the device is full duplex, two-way audio will be started automatically.
- If the device is half-duplex, you have to tap and hold to talk, and release to listen.
- **4.** Tap \otimes to turn off two-way audio.

8.6 Capturing and Recording

During live view, you can capture pictures of the live video and record video footage.

Steps

1. Start live view of a camera.

i Note

See Start and Stop Live View for details.

2. Capture a picture or record video footage.

Capture Picture	Tap 🔯 to capture a picture.	

 Record Video
 Tap I to start recording video footage,

 Footage
 tap again to stop.

The captured pictures and recorded videos will be saved in More → Pictures and Videos . For details about managing pictures and videos, see *Pictures and Videos*.

8.7 Set Image Quality for Device Added by IP/Domain

For devices added via IP/Domain, you can set its image quality to Fluent or Clear. You can also customize image quality for the devices.

Steps

i Note

- If you change the image quality, the live view and recording of the device may be affected due to the new settings.
- In multi-window mode, you can only set the image quality to Fluent, or customize the image quality and the stream type can only be Sub Stream.
- 1. Start live view of a device added via IP/Domain.

i Note

See Start and Stop Live View for details.

2.

Tap BASIC on the live view page to enter the quality switching panel.

i Note

The icon vary with the actual video quality.

- 3. Set the image quality as desired.
 - Tap Clear to set the image quality as Clear.
 - Tap Fluent to set the image quality as Fluent.
 - Tap Custom to open the Custom Settings window, and then configure the parameters and tap Confirm to confirm the custom settings.

i Note

- The live view effect is related to the performance of your network and hardware of your network and phone. If the live view is not fluent or the image appears blurred, reduce the resolution, frame rate and bitrate of the camera in custom mode, or set the image quality as fluent mode.
- · The following table shows the recommended frame rate and bitrate configuration for different resolution at H.264, H. 264+ and H.265 video compression by using iPhone 5S.

Resoluti on	1-ch	2-ch	4-ch	Recommended Configuration
H.264 (Ha	rdware	Decodi	ng)

720P	٧	٧		Frame rate: 25fps; Bit rate: 1Mbps
4CIF	٧	٧	٧	Frame rate: 25fps; Bit rate: 256Kbps

8.8 Set Image Quality for Guarding Vision Device

Usually three pre-defined image qualities are provided in the Mobile Client for Guarding Vision device: Basic, Standard, and High Definition.

Steps
i Note
The provided image quality types may vary with different devices.
1. Start live view of a Guarding Vision device.
L i Note
Constructions of Change Lines Minus from distants

See Start and Stop Live View for details.

2. Tap BASIC to enter the quality switching panel.

i Note

The icon may vary with the actual image quality.

Set image quality.

Basic

Basic image quality.

i Note

Basic is the default image quality.

Standard

Standard image quality (the image quality is higher than that of Basic and lower than that of HD).

HD

High definition image quality (the image quality is the highest of the three).

8.9 Live View for Fisheye Camera

In the fisheye view mode, the whole wide-angle view of the fisheye camera is displayed. Fisheye expansion can expand images in five modes: 180° panorama, 360° panorama, 4-PTZ, semisphere, and cylindrical-surface.

Ste	ps

i Note

The function is only supported by fisheye camera.

1. Start live view of a fisheye camera.

i Note

See Start and Stop Live View for details.

2. Tap 🔘 to show the fisheye expansion panel.

3. Select mounting type.

Table 8-2 Mounting Type

lcon	Description	
D	Wall Mounting	
Ð	Ceiling Mounting	

4. Select fisheye expansion mode.

Table 8-3 Fisheye Expansion Mode

lcon	Description		
0	Fisheye view for ceiling mounting and wall mounting. In the Fisheye view mode, the whole wide-angle view of the camera is displayed. The mode is the vision of a fish's convex eye. The lens produces curvilinear images of a large area, while distorting the perspective and angles of objects in the image. In this mode, you can pinch the fingers together to zoom out the image, and spread them apart to zoom in.		
Ξ	Dual-180° panorama view for ceiling mounting. The distorted fisheye image is		

Icon	Description
	transformed to normal perspective image. In this mode, you can swipe to the left or to the right to adjust the field of view.
	360° panorama view for ceiling mounting and wall mounting. The distorted fisheye image is transformed to normal perspective image. In this mode, you can swipe to the left or to the right to adjust the field of view.
==	4 PTZ Views for ceiling mounting and wall mounting. The PTZ view is the close-up view of some defined area in the Fisheye view or Panorama view. In this mode, you can pinch the fingers together to zoom out the image, and spread them apart to zoom in. You can also swipe the screen to perform pan and tilt movement.
Θ	Semisphere-shaped view for wall mounting. In this mode, the whole wide- angle view of the camera is displayed. The lens produces curvilinear images of a large area, while distorting the perspective and angles of objects in the image. In this mode, you can drag the image to adjust the view angle, and pinch the fingers together to zoom out the image, and spread them apart to zoom in.
0	Cylindrical-surface-shaped view for wall mounting. In this mode, the whole wide- angle view of the camera is displayed. The lens produces curvilinear images of a large area, while distorting the perspective and angles of objects in the image. In this mode, you can drag the image to adjust the view angle, swipe to the left or to the right to adjust the field of view, as well as pinch the fingers together to zoom out the image and spread them apart to zoom in.

8.10 Open Door During Live View

You can open or close the door when viewing the live video of a video intercom device or a related camera of an access control

device. This function allows you to check the visitor or the situation nearby the door before you open it.

i Note

The device should support this function.

For the access control device's related cameras, select a live view window and tap **1**, and then enter the device verification code to open the door.

For the video intercom device, select a live view window and tap a, and then enter the device verification code to open the door.

i Note

The default device verification code is usually on the device label. If no verification code found, enter the device verification code you created when enabling Guarding Vision service.

8.11 Other Functions

The PTZ Control panels provide other functions such as PTZ speed adjustment, auto-scan, focus control, and iris control.

Tap More on the PTZ Control panel to view the functions.

Table 8-4 Other Functions

Icon	Description
Ó	Start/stop the auto-scan.
\$	Zoom control: 🛛 Zoom+/ 🕅 Zoom-
•	Focus control: M Focus +/ M Focus -
©	Iris control: 🕲 Iris +/ 🕲 Iris -
	Adjust PTZ speed.

9 Playback

You can search the recorded video files stored in the added device for remote playback.

9.1 Start and Stop Playback

You can search the camera's recorded video files in a selected time period and then start playback.

Steps

- On the device list page, tap ^b∂ at the upper-left corner to enter the Select Item(s) page.
- 2. Set the date and time for playback. Playback Date

Select a date.

i Note

The date during which video files were recorded is marked with a yellow dot.

Playback Time

Set the start time point for the playback in the selected date.

3. Select camera(s).

```
i Note
```

You can select up to 4 cameras.

- 4. Tap Start Playback to enter the Playback page.
- 5. Optional: Perform the following operations.

Adjust Playback Time	Slide the timeline to adjust the playback time.	
	i Note	
	represents continuous recording	
	and represents event-triggered recording.	
Scale up and down Timeline	Spread two fingers apart to scale up the timeline or pinch them together to scale down.	

Figure 9-1 Timeline

9.2 Capturing and Recording

During playback, you can capture pictures and record video footage.

Steps

1. Start playback.

i Note

See Start and Stop Playback for details.

2. Capture a picture or record video footage.

Capture a Picture Tap **to capture a picture**.

Reccord Video	Tap 📧 to start recording video footage,
Footage	tap again to stop.

The captured pictures and recorded videos will be saved in More → Pictures and Videos . For details about managing pictures and videos, see Pictures and Videos.

9.3 Set Playback Quality for Device Added by IP/Domain

For devices added by IP/Domain, you can set the image quality of playback for them.

Steps

i Note

For details about adding device by IP/Domain, see *Add a Device* by IP/Domain.

 Select a device added by IP/Domain on the device list and then start playback.

i Note

For details about starting playback, see *Start and Stop Playback*.

2.

Tap **BASIC** on the playback page to enter the quality switching panel.

i Note

The icon may vary with the actual video quality.

- 3. Set the image quality as desired.
 - Tap Clear to tap the image quality to Clear.
 - Tap Custom to open the Custom Settings window, and then configure the parameters (Resolution, Frame Rate, and Bitrate) and tap Confirm to confirm the custom settings.

i Note

- The image effect is related to the performance of your network and phone. If the image is not fluent or the screen appears blurred, reduce the resolution, frame rate and bitrate of the camera in custom mode.
- The following table shows the recommended frame rate and bitrate configuration for different resolution at H.264, H.
 264+ and H.265 video compression by using iPhone 5S.

Resoluti on	1-ch	2-ch	4-ch	Recommended Configuration
H.264 (Ha	rdware	Decodi	ng)	
1080P	٧	v	٧	Frame rate: 25fps; Bit rate: 4Mbps
720P	٧	٧	٧	Frame rate: 25fps; Bit rate: 2Mbps
4CIF	٧	v	٧	Frame rate: 25fps; Bit rate: 512Kbps
H.264 (Software Decoding)				
720P	٧	٧		Frame rate: 25fps; Bit rate: 2Mbps

Table 9-1 Recommended Configuration

Resoluti on	1-ch	2-ch	4-ch	Recommended Configuration
4CIF	٧	٧	٧	Frame rate: 25fps; Bit rate: 512Kbps
H.264+ (H	ardware	e Decoc	ling)	
1080P	٧	٧	٧	Frame rate: 25fps; Bit rate: 4Mbps
720P	٧	٧	٧	Frame rate: 25fps; Bit rate: 2Mbps
H.264+ (Software Decoding)				
720P	٧	٧		Frame rate: 25fps; Bit rate: 2Mbps
H.265 (Software Decoding. Hardware decoding is not supported.)				
1080P	٧			Frame rate: 25fps; Bit rate: 2Mbps
720P	٧	٧		Frame rate: 25fps; Bit rate: 1Mbps
4CIF	٧	٧	٧	Frame rate: 25fps; Bit rate: 256Kbps

10 Access Control

Access control is the selective restriction of access to a place or other resources. After adding access control devices to the Mobile Client, you can remotely control the doors, and configure duration in which the doors remain open. You can also filter and view access control device's logs, which provide the information of access control events and related alarms, such as access controller tampering alarm. Besides the above-mentioned functionality, you can change supper password of the access control device.

10.1 Control Door Status

The Mobile Client allows you to control the status of the access control devices' related doors by the super password of the device.

Before You Start

- Add an access control device to the Mobile Client. See Add Device for Management for details.
- Link doors to the access control device. See the user manual of the access control device for details.

Steps

🔟 Note

You can change the super password. See *Change Super Password* for details.

 On the device list page, tap the door icon on the right of the access control device to enter the door control page.

ACS

Figure 10-1 The Icon Representing Door

2. Control the door status. Remain Open

Keep the door open.

Open Door

Open the door for a configurable time period. When the time period expires, the door will close.

i Note

For details about configuring the time period, see **Set Door Open Duration**.

Remain Closed

Keep the door closed. In this status, the door can only be opened by super card or super password.

i Note

For details about super card, see the user manual of the access control device.

3. Enter the super password.

i Note

By default, the super password is the device verification code. You can change the super password. See **Change Super Password** for details.

The door status will change.

10.2 Set Door Open Duration

You can set the door open duration for the access control device. When the duration expires, the door will close automatically.

Before You Start

You should have added an access control device to the Mobile Client.

See Add Device for Management for details.

Steps

- 1. Enter the Settings page of the access control device.
 - On the device list page, if the page is in the list mode, swipe the device name to the left and tap 🕲 .
 - On the device list page, if the page is in thumbnail mode, tap the device name or tap
 - On the Live View page, tap and then tap Settings.

i Note

For details about how to enter the Live View page, see *Start* and *Stop Live View*.

- 2. Tap Door Open Duration to open the Door Open Duration list.
- 3. Select a duration from the list.
- Tap
 ^O to confirm the selection.

If you tap **Open Door** in the door control page, the door will open for the configured time duration.

i Note

For details about controlling door status, see **Control Door Status**.

10.3 Change Super Password

The Mobile Client allows you to change the super password of the access control device, which can be used to open all the access control points (e.g., doors), even when the access control point is in remaining closed status.

Before You Start

Add an access control device to the Mobile Client. See Add Device for Management for details.

Steps

i Note

For details about super password of the access control device, see the user manual of the device.

- 1. Enter the Settings page of the access control device.
 - On the device list page, if the device list is in list mode, swipe the name of the access control device to the left and tap 🕲 .
 - On the device list page, if the device list is in thumbnail mode, tap the name of the access control device or tap … .
 - On the Live View page. tap •••• and then tap Settings.

i Note

For details about how to enter the Live View page, see **Start** and Stop Live View

- 2. Tap Change Password to enter the Change Password page.
- 3. Enter the old password and tap Next.

i Note

If it is the first time to set the super password, skip this step.

4. Create a new password and then tap Finish.

i Note

The password should contain 6 numbers.

10.4 View Access Control Logs

You can view the access control device's logs including the access control events and alarm information. You can also filter the logs.

Steps

 On the device list page, tap the door icon on the right of the access control device to enter the door control page.

```
ACS
```

Figure 10-2 The Icon Representing Door

The log list will be displayed on the Log section of the page.

2. Perform the following operations.

Refresh Log List	Swipe the log list downward to refresh it.
View All Logs	Tap View All Logs to enter the Log page and view all access control device logs.
Filter Logs	On the Log page, tap Filter and then set the filtering condition (time and event type) to filter.

11 Security Control

The Mobile Client supports video security control panel, Axiom wireless security control panel, and Pyronix security control panel.

A security control panel uses embedded microcontroller technology for monitoring arming zones, handling alarm signal from the triggers, and uploading alarm reports to the central alarm monitoring station through multiple transmission methods such as PSTN, wired network, wireless network, and so on.

11.1 Video Security Control Panel

You can add video security control panel to the Mobile Client. Video security control panel supports analog or digital HD video input and can be used cooperatively with the video surveillance and access control system over client software. It supports uploading reports to the alarm receiving centers with various transmission modes such as PSTN, network and GPRS.

On the Mobile Client, you can set partition status, manage zones, and set voice prompt for the security control panel.

11.1.1 Partition and Zone Control

The Mobile Client allows you to set arming mode of a partition, and control the zones. You can set arming mode for a specific zone, set zone parameters, link a camera to a zone, etc.

Partition, which is an independent control system of a security control panel, allows you to batch arm/disarm all zones in it. If the security control panel has two partitions, you have two independent systems for arming or disarming.

Zone is a basic concept in the security control panel system. It refers to a protection area in the system, and is regarded as the maximum recognizable unit to distinguish the alarm event.

i Note

For more information about partition and zone, see the user manual of the security control panel.

Control A Zone

You can set the arming mode of a single zone to arm or disarm.

Before You Start

Enable single zone arming or disarming via Guarding Vision client software. For details, see the user manual of the security control panel.

Steps

- On the device list, tap the arming status icon on the right of the security control to enter the Partition page.
- Optional: If the device contains more than one partition, tap the partition name at the top of the page to switch partitions.
- Select a zone in the partition and tap the switch icon to arm or disarm it.

Control All Zones in One Partition

You can control the arming status of all zones in a partition.

Steps

i Note

- The function should be supported by the device.
- The security control panel's Single Zone Arming or Disarming function should be disabled. For details, see the user manual of the security control panel.
- 1. On the device list, tap the arming status icon on the right of the security control to enter the Partition page.

<	Partition1 ~	¢
		Clear Alarm
Away	Stay	Disarm
Zone		
AlarmIn3		ţŷ
AlarmIn4 Normal		<u>کې</u>
AlarmIn5		ţŷ}
AlarmIn6 Normal		Ś

Figure 11-1 Partition Page

- Optional: If the device contains more than one partition, tap the partition name at the top of the page to switch partitions.
- Optional: View zone status.

Bypass

The zone is bypassed. For details about bypassing a zone, see **Bypass a Zone**.

Fault

The detector is faulty.

i Note

When a zone is faulty, bypass the zone to ensure the partition which the zone belongs to can be armed.

4. Control all zones in the partition.

Away

When all the people in the detection area leave, turn on the away arming mode to turn on all zones in the partition after the defined dwell time.

Stay

When the people stays inside the detection area, turn on the stay arming mode to turn on all the perimeter burglary detection (such as perimeter detector, magnetic contacts, curtain detector in the balcony). At the meantime, the detectors inside the detection area are bypassed (such as PIR detectors). People can move inside the area and alarm will not be triggered.

Disarm

In disarming mode, all the zones in the partition will not trigger alarm, no matter alarm events happen or not.

Clear Alarm

When zones in the partition trigger alarms, tap **Clear Alarm** to clear the sound and light alarming prompt.

Delay

Set the enter delay time and the exit delay time for the delayed zone.

Enter Delay Time

The waiting period between the indoor station triggering alarms and sending alarm information to the alarm center. Therefore, during entering delay time, you can disarm the zone without triggering alarms.

Exit Delay Time

The time period between the time when you arm the indoor station and the time when the arming take effect. Exit delay allows you to exit the zone without triggering alarms after arming the zone.

11.1.2 Add a Zone

The Mobile Client allows you to add zones (detectors) to the security control panel.

Before You Start

Add a video security control panel to the Mobile Client. See **Add Device for Management** for details.

Steps

- On the device list page, tap the arming status icon on the right of the video security control panel to enter the Partition page.
- 2. Tap + to scan the detector's QR code.

i Note

The QR code is usually on the back cover of the detector.

3. Optional: Manually add the detector if the QR code is not recognized.

1) Tap 🚾 , and then enter the detector's serial number.

2) Tap 🦳 to search for the detector.

4. Tap Add on the Result page.

5. Tap Finish.

11.1.3 Set Zone Parameters

You can set zone parameters such as zone name, zone type, and detector type.

Select a zone on the Partition page and tap (20) to enter the Settings page of the zone.

Edit Zone Name

Tap the zone name to edit it.

i Note

The zone name should contain 1 to 50 characters.

Set Zone Type

Tap the zone type to select a type from the Zone Type page. Instant Zone

The zone will be immediately triggered when it detects alarm event without entering and exiting delay. The detectors of this zone are in alert condition for 24 hours every day. The detectors can be affected by arming and disarming operation, and can be bypassed. When the zone detects alarm events, the sound and light alarming prompt will be triggered on the keyboard. The siren output will be triggered when the siren is linked, meanwhile the generated event report will be uploaded to the center receiver (reporting code is different from 24-hour audible alarm zone), and the zone alarm status can be checked on the Mobile Client. It is generally applied to smoke detector.

i Note

Detectors in instant zone can be affected by arming or disarming operation, and can be bypassed.

24H Silent Alarm Zone

The detectors of this zone are in alert condition for 24 hours every day. The detectors will not be affected by arming and disarming operation or be bypassed. When the zone detects alarm events, the sound and light alarming prompt will be triggered on the keyboard. The siren output will be triggered when the siren is linked, meanwhile the generated event report will be uploaded to the center receiver, and the zone alarm status can be checked on the Mobile Client. This zone type is generally applied to the sites equipped with emergency button (e.g. bank and jewelry counter).

Delayed Zone

The zone will not be in alert condition during exit delay and enter delay. Exit Delay provides you time to leave through the defense area without alarm. Entry Delay provides you time to enter the defense area to disarm the system without alarm. This zone type is mainly used in entrance/exit route (e.g. front door/main entrance), which is a key route to operate keyboard for users.

Internal Zone

The internal zone is usually set within a delayed zone. After arming the partition, if the delayed zone is triggered first, the system will provide entry delay for both the delayed zone and the internal zone. If not, the internal zone will trigger alarm instantly. The delay parameters of internal zone are the same with that of the delayed zone. It is usually set in the rest room or hall (e.g. motion detector), which is a key place to operate keyboard for users.

i Note

For the introduction of other zone types, see the user manual of the security control panel.

Set Detector Type

Tap Detector Type to select a detector type.

Active Infrared Detector

The detector consists of infrared emission device and infrared receiving device. If the infrared ray sent from the emission device is blocked, and the receiver cannot receive the infrared ray, the device will send an alarm.

Passive Infrared Detector

The detector doesn't emit any energy itself. It only receives emissions from environments. When the infrared rays from living things are detected, the detector will send an alarm.

Dual Technology Motion Detector

The detector consists of a Passive Infrared Receiver (PIR) and microwave sensor, the two need to be activated simultaneously to trigger an alarm.

i Note

For the introduction of other detector types, see the user manual of the security control panel.

11.1.4 Bypass a Zone

If you bypass a zone, the zone will NOT be in alert condition (related alarms will not be triggered and related faults will not be detected) even when the system (or partition) which it belongs to is armed. Bypassing a zone is usually used in the following two scenarios. The first is that if a zone is faulty, other zones of the same system (or partition) can be armed only when the faulty zone is bypassed. The second is that you simply want a specific zone NOT to trigger alarms in special occasions.

Select a zone on the Partition page and tap (1) to enter the Settings page of the zone, and then enable zone bypass.

i Note

For details about how to enter the Partition page, see **Partition** and **Zone Control**.

11.1.5 Link Camera to Zone

After linking a camera to a zone, you can view the live video of the zone on the Mobile Client.

Steps

- On the device list, tap the arming status icon on the right of the security control to enter the Partition page.
- Optional: If the device contains more than one partition, tap the partition name at the top of the page to switch partitions.
- 3. Tap 🖾 to enter the Setting page of the zone.
- 4. Select a camera in Available Camera section.

i Note

You can swipe the camera group to the left or right to view all the available cameras.

5. Tap Link to link the selected camera to the zone.

6. Tap Finish

 \bigcirc will be displayed on the right side of the zone in the zone list. You can tap \bigcirc to view the zone's live video.

11.1.6 Enable Voice Prompt

For a security control panel, the voice prompt offers you information about system operations or the triggered alarms.

i Note

The function should be supported by the device.

On the device list page, slide the device to the left and tap ⁽²⁾ or … to enter the Settings page. Tap the switch icon of Device Voice Prompt to enable or disable the function.

11.1.7 Delete Zone

You can delete a specific zone from a security control panel.

Steps

- 1. On the device list, tap the arming status icon on the right of the security control to enter the Partition page.
- Optional: If the device contains more than one partition, tap the partition name at the top of the page to switch partitions.
- 3. Select zone and tap 🖾 to enter the Settings page.
- Tap More → Delete to delete the zone.

11.2 Axiom Wireless Security Control Panel

After adding the wireless security control panel to the Mobile Client, you can add wireless devices (including detectors, keyfobs, wireless outputs expander, repeater, and siren) and cards/tags to the control panel. After that, you can control the alarm system by remotely arming or disarming partitions via the Mobile Client, remotely pressing keys on keyfob, or swiping card.

i Note

For details about how to add an Axiom wireless security control panel to the Mobile Client, see *Add a Device by Scanning Device QR Code* or *Add a Device by Guarding Vision Domain*.

11.2.1 Log in to the Security Control Panel

If the installer (or setter), which is a type of user of the security control panel, has enabled EN Certification settings, you should log in to the device before you can access the device.

i Note

For details about EN Certification settings, see Configure Securi	ty
Control Panel.	

On the device list page, tap the security control panel to enter the Verify Device page and then log in to the device.

11.2.2 Configure Security Control Panel

On the Settings page of the security control panel, you can view and edit the basic information such as device name. You can also do configurations such as device time settings, network settings, account permission settings, device language, etc.

Steps

i Note

There are four types of users of the security control panel, including administrator (or owner), operator, installer (or setter), and manufacturer. Different types of users have different permissions for configuring the parameters mentioned in the following task. You can manage the users and their permissions on the Web Client of the security control panel. For details, see the user manual of the device.

- 1. On the device list page, tap the security control panel and then log in to the device (if required) to enter the Partition page.
- Tap 2. Tap 2 to enter the Settings page.

3. Set the parameters on the page such as time zone.

Time Zone

Set the time zone where the security control panel locates in.

i Note

You should have the permission to set the time zone.

DST

Enable or disable Daylight Saving Time.

i Note

You should have the permission to set DST.

Account Management

You can view the user name and user type of the current security control panel account, change the device password, and set user permission.

i Note

We highly recommend you to create a strong password of your own choosing (using a minimum of 8 characters, including at least three kinds of following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

User Permission

The administrator (or owner) and installer (or setter) can authorize the permission to use the device for other types of users.

Enable Arming Process

After enabled, the security control panel will automatically detect its default(s) during the arming process. If default(s) are detected, you can continue or stop the arming process according to the actual situation.

Device Version

If new version is available, a red dot will be displayed. In this case, you can tap to upgrade the device version.

i Note

You should have the permission to upgrade device version.

EN Certification

If enabled, the security control panel will be compliant with EN 50131-1 standard (Grade 2). And all users of the security control panel should log in to the device by user name and device password before they can access the device.

\land Caution

If disabled, the security control panel will NOT be compliant with EN 50131-1 standard. Please contact the after sales or our technical support for information about the risks that may be incurred in your country if you disable EN Certification.

i Note

Only the installer(or setter) has the permission to set **EN** certification. For other types of users, the parameter will not be displayed on the Settings page.

11.2.3 Add Wireless Device to Security Control Panel

You should add wireless devices to the panel before you can perform further operations such as arming and disarming. The wireless devices include detectors (or zones), wireless outputs expanders, sirens, and repeaters.

Steps

i Note

You can add up to 32 detectors (or zones), 2 repeaters, and 4 wireless outputs expanders to the security control panel respectively.

- On the device list page, tap the security control panel and then log in to the device (if required) to enter the Partition page.
- **2.** Tap Wireless Device $\rightarrow \pm$ to enter the Scan QR Code page.
- 3. Scan the QR code of the wireless device.

i Note

The QR code is usually on the back cover of the device.

 Optional: If the QR code fails to be recognized, tap and enter the serial number of the device, and then select the device type.

i Note

The serial number is usually on the back cover of the device.

- 5. Tap Add.
- 6. Optional: Tap the wireless device on the zone list or the wireless device list to enter the Settings page and then tap Delete to delete the wireless device.

11.2.4 Add Keyfob for Remote Control

You can add keyfobs to the Axiom wireless security control panel to remotely control the partition of the panel.

Steps

i Note

Up to 8 keyfobs can be added to the panel.

 On the device list page, tap the arming status icon of the Axiom wireless security control panel to enter the partition page.

i Note

If the device list page is in list mode, the arming status icon is displayed as or . If in thumbnail mode, the arming status icon is displayed as or .

- 2. Tap 🛨 and then tap Add Keyfob on the Scan QR Code page.
- 3. Present the keyfob to the security control panel.
- 4. Press any button on the keyfob to learn.
- 5. Enter the keyfob name.

i Note

The keyfob name should contain 1 to 32 characters.

6. Tap Finish.

11.2.5 Add Cards/Tags for Arming/Disarming

After adding cards or tags to the wireless security control panel, you can swipe the card or tag to arm or disarm all the detectors added to the panel, as well as clear alarms.

Steps

i Note

Up to 12 cards or tags can be added.

- 1. Enter the Settings page of the Axiom wireless security control panel.
 - On the device list page, if the page is displayed in list mode, swipe the device name to the left and then tap ⁽²⁾.
 - On the device list page, if the page is displayed in thumbnail mode, tap the device name or tap ··· .
 - Tap is at the Partition page.

2. Tap Card/Tag Management → Add New Card/Tag .

- 3. Present the card to the device when hearing a voice prompt.
- 4. Create a card/tag name.

i Note

The name should contain 1 to 32 characters.

5. Tap Finish.

11.2.6 Set Partition Parameters

The Mobile Client allows you to set partition parameters such as alarm duration, auto arm, and auto disarm. A partition is an independent control system of a security control panel. It allows you to batch arm/disarm all zones in it. If the security control panel has two partitions, you have two independent systems for arming or disarming.

Steps

- 1. On the device list, tap the security control panel and then log in to the device (if required) to enter the Partition page.
- 2. Tap More to enter the Settings page.
- 3. Configure parameters for the partition.

Auto Arm

Enable the partition to automatically arm itself in a specific time point.

Auto Arm Time

Set the time point for the partition to automatically arm itself.

Late to Disarm

Enable the partition to push notifications to the phonewhen the partition is not armed after a specific time point.

i Note

You should have enabled system status notification on the Web Client of the wireless security control panel, or the notification will not be pushed to the phone. For details about the Web Client, see the Wireless Security Control Panel User Manual for details.

Late to Disarm Time

Set the time point mentioned in Late to Disarm.

Weekend Exception

If enabled, Auto Arm, Auto Disarm, and Late to Disarm are disabled on the weekend.

Entry Delay 1 Entry Delay 2

Set a value for **Entry Delay 1** and **Entry Delay2**. Entry delay is a time concept. If entry delay is configured for the delayed zone, when you enter an armed delayed zone, the zone alarm will not be triggered until the end of entry delay.

i Note

After set value for Entry Delay 1 and Entry Delay 2, you should set the entry delay of a specific zone to the value of Entry Delay 1 or Entry Delay 2. see Set Zone Parameters for details.

Exit Delay

Set exit delay for the delayed zone. If exit delay is configured for the delayed zone, after you arm the zone on the indoor unit, you can exit the zone without triggering alarm until the end of exit delay.

Siren Delay Time (Perimeter Alarm)

The duration that the siren lasts when perimeter alarm is triggered.

i Note

For details about perimeter alarm, see the user manual of the security control panel.

11.2.7 Control Partitions

You can set arming mode and clearing alarm for partition of the security control panel via the Mobile Client. Partition, which is an independent control system of a security control panel, allows you to batch arm/disarm all zones in it. If the security control panel has two partitions, you have two independent systems for arming or disarming.

i Note

The Axiom wireless security control panel supports only one partition (or independent system) currently.

On the device list page, tap the security control panel and then log in to the device (if required) to enter the Partition page and then control the partition.

i Note

If the device list page is in list mode, the arming status icon is displayed as \bigcirc or \bigcirc . If in thumbnail mode, the arming status icon is displayed as \bigcirc or \bigcirc .

- Away Arming: When all the people in the detection area leave, turn on the away arming mode to turn on all zones in the partition after the defined dwell time.
- Stay Arming: When the people stays inside the detection area, turn on the stay arming mode to turn on all the perimeter burglary detection (such as perimeter detector, magnetic contacts, curtain detector in the balcony). At the meantime, the detectors inside the detection area are bypassed (such as PIR detectors). People can move inside the area and alarm will not be triggered.
- Disarming: In disarming mode, all the zones in the partition will not trigger alarm, no matter alarm events happen or not.
- Clear Alarm: In disarming mode, all the zones in the partition will not trigger alarm, no matter alarm events happen or not.

11.2.8 Set Zone Parameters

You can set zone parameters, such as zone type, linked camera, and Stay/Away settings. Zone is a basic concept in the security control panel system. It refers to a protection area in the system, and is regarded as the maximum recognizable unit to distinguish the alarm event.

Before You Start

You should have linked detector(s) to the wireless security control panel. For details, see the user manual of the security control panel.

Steps

- On the device list page, tap the security control panel and then log in to the device (if required) to enter the control panel page.
- 2. Tap Zone and then tap a detector (zone) on the zone list to enter the Settings page.

	Settings
001	>
Serial No.	Q00186581
Detector Type	Other Detector
Zone Type	Instant Zone 🗦
Zone Bypass	OFF
Link Camera	>
Stay/Away	OFF
The zone will be auto when enabled.	o-bypassed during stay-arming
Chime	OFF

Figure 11-2 Zone Settings Page

Set parameters for the zone (or detector). Zone Type

See the descriptions of each zone type on the Zone Type page.

If you select **Delayed Zone**, you should select an entry delay (Entry Delay 1 or Entry Delay 2) on the pop-up page.

i Note

You can set Entry Delay 1 and Entry Delay 2. See *Set Partition Parameters* for details.

If you select **Timeout Zone**, you should select a timeout value or tap **Custom** to set a custom value.

Linked Camera

Link a camera to the zone. See *Link Camera to Zone* for details.

Stay/Away

If enabled, the zone will be auto-bypassed during stay arming.

i Note

For details about bypassing a zone, see Bypass a Zone.

Chime

Enable the security control panel to chime when the zone is triggered.

Enable Silent Zone

If enabled, no siren will be triggered if alarm occurs.

11.2.9 Bypass a Zone

If you bypass a zone, the zone will NOT be in alert condition (related alarms will not be triggered and related faults will not be detected) even when the system (or partition) which it belongs to is armed. Bypassing a zone is usually used in the following two scenarios. The first is that if a zone is faulty, other zones of the same system (or partition) can be armed only when the faulty zone is bypassed. The second is that you simply want a specific zone NOT to trigger alarms in special occasions.

On the Settings page of a detector (or zone), turn on Zone Bypass to bypass the detector (or zone).

i Note

For details about how to enter the Settings page of a detector (or zone), see *Set Zone Parameters*.

11.2.10 Link Camera to Zone

If a network camera has already been linked to the wireless security control panel, you can link the camera to a zone managed by the control panel via the Mobile Client. After that, you can view the zone's alarm-related video when receiving the zone's alarm notification. You can also link a network camera added to the Mobile Client to a zone managed by the control panel, so as to view the zone's live video and play back the zone's videos.

Before You Start

- You should have mounted the network camera in the zone. See the user manual of the network camera for details.
- To view the alarm-related video when receiving zone's alarm notification, you should have linked the network camera to the wireless security control panel via the panel's Web Client. For details, see the user manual of the Axiom wireless security control panel.

Steps

i Note

The zone's alarm-related video lasts 7 seconds (from 5 seconds before the alarm to 2 seconds after the alarm).

- 1. On the device list page, tap the security control panel and then log in to the device (if required) to enter the Partition page.
- 2. Tap Zone and then select a detector from the zone list.
- 3. Tap Link Camera to enter the Link Camera page.

Figure 11-3 Link Camera Page

Drag a camera from the Available Cameras section to
 Tap Link .

11.2.11 Set Parameters of Wireless Outputs Expander

You can set the alarm output type and the output delay for the relays of a wireless outputs expander. Alarm output is the node signal or other signal sent from the alarm controller to the peripheral devices when the alarm is triggered.

Before You Start

You should have added wireless outputs expander(s) to the wireless security control panel.

Steps

- On the device list page, tap the security control panel and then log in to the device (if required) to enter the Partition page.
- Tap Wireless Device and then tap a wireless outputs expander on the device list.

The relays of the expander will be displayed.

3. Configure the relay.

Edit Relay Name	Tap a relay and then tap the relay name to edit its name. And then tap \blacksquare .
Select Alarm Output Type	Tap a relay and then select an alarm output type. Alarm
	Alarm outputs will be activated when the zone alarms.
	Arming
	Alarm outputs will be activated when the partition (system) is armed.
	Disarming
	Alarm outputs will be activated when the partition (system) is disarmed.
	14-mul

Manual

Set the switch icon to ON on the relay list to manually activate alarm outputs of the relay.

Set Delay	Tap a relay and then tap Output Delay to set
Time for	the delay time for the relay to close. In other
the Relay	words, output delay refers to the duration of
to Close	the alarm output.

11.2.12 Set Siren Parameters

You can edit the siren name and set the siren's volume.

Before You Start

You should have add siren(s) to the security control panel.

Steps

- On the device list page, tap the security control panel and then log in to the device (if required) to enter the Partition page.
- 2. Tap Wireless Device and then tap a siren on the device list to enter the siren settings page.
- 3. Perform the following operations.

Edit Siren Name	Tap the siren name to edit it, and then tap $\overline{\blacksquare}$.
Set Siren Volume	Drag the slider to set the volume.

11.3 Pyronix Control Panel

On the Mobile Client, Pyronix control panel refers to the security contorl panel (or alarm panel) designed and manufactured by Pyronix. You can add the Pyronix control panels to the Mobile Client for management, such as arming and disarming areas (or partitions), viewing zone history event, and bypassing zone.

i Note

After adding the device to the Mobile Client, you should authorize the account of the Mobile Client to access the device, and verify the device before you can manage it. The flow chart of the overall process is shown below.

Figure 11-4 Flow Chart

11.3.1 Add Pyronix Control Panel to Mobile Client

You can add Pyronix control panels to the Mobile Client for management of the devices.

Before You Start

Steps

- 1. Tap 🖶 on the device list page and then select Manual Adding.
- 2. Select Pyronix as the adding type.
- 3. Enter the device alias and serial number.
- Tap loss save the settings.

The device will be displayed on the device list.

What to do next

Authorize your account of the Mobile Client via PyronixCloud, otherwise you won't have the permission to access the device via the Mobile Client. See *Authorize Mobile Client Account via PyronixCloud* for details.

And then verify the device on the Mobile Client. See *Verify Pyronix Control Panel* for details.

11.3.2 Authorize Mobile Client Account via PyronixCloud

Before you can manage a Pyronix control panel on the Mobile Client, you should authorize your account of the Mobile Client via PyronixCloud first, which operates as a gateway between the device and the Mobile Client.

The flow chart is shown below:

Figure 11-5 Flow Chart of the Authorization

Create a PyronixCloud Account

You should create a PyronixCloud account before you can connect a Pyronix control panel to PyronixCloud.

Steps

1. Visit http://www.pyronixcloud.com .

Pyronix Cloud					
Email Address					
Create an account Reset Password					
Language: English (UK)					

Figure 11-6 The Web Page of PyronixCloud

2. Click Create an account and complete the form.

You will receive an email with a confirmation link from admin@pyronixcloud.com.

3. Click the link to complete confirmation.

What to do next

Connect the Pyronix control panel to PyronixCloud. See *Connect Device to PyronixCloud* for details.

Connect Device to PyronixCloud

After creating a Pyronix account, you should connect a Pyronix control panel to the PyronixCloud before you can authorize your account of the Mobile Client.

Before You Start

Create a Pyronix account. See **Create a PyronixCloud Account** for details.

Steps

- 1. Visit http://www.pyronixcloud.com and log in to your account.
- 2. Register a new system.
 - 1) Enter the required information.

System ID

The system ID is an unique ID for a Pyronix control panel. You can get the system ID via the device. For details, see the user manual of the device.

Cloud Password

Enter the cloud password that you have entered in the Pyronix control panel (or alarm panel). The cloud password is set via the device. For details, see the user manual of the device.

2) Click Submit.

Register New System	
System ID: Cloud Password (as entered in the alarm panel): Submit	

Figure 11-7 Register a New System

3. Enter a system reference to create an alias for the device.

4. Click Submit.

You will receive an email with a confirmation link.

5. Click the confirmation link to continue.

The device will be displayed on View Systems page.

Click the tick at the upper-right corner of the page to make sure the device is connected.

What to do next

Authorize your account of the Mobile Client. See *Authorize Mobile Client Account* for details.

Authorize Mobile Client Account

Perform the following task to authorize your account of the Mobile Client.

Before You Start

Create a PyronixCloud account and connect the Pyronxix control panel to PyronixCloud. See *Create a PyronixCloud Account* and *Connect Device to PyronixCloud* for details.

Steps

- 1. Connect the Pyronix control panel to PyronixCloud to enter the View Systems page.
- 2. On the View Systems page, click a system ID to enter the device user list page.
- 3. Select your account of the Mobile Client from the User column.
- 4. Switch the permission to ON.

Figure 11-8 Device User List Page

5. Click Save Now.

You can access the Pyronix control panel via the Mobile Client.

11.3.3 Verify Pyronix Control Panel

If a Pyronix control panel is not verified, you should verify it before you can manage it on the Mobile Client.

Before You Start

- Add a Pyronix control panel to the Mobile Client. See Add Pyronix Control Panel to Mobile Client for details.
- Set the user code and APP password via the Pyronix control panel. For details, see the user manual of the device.

Steps

- 1. On the device list page, tap a Pyronix control panel to enter the Verify Device page.
- 2. Enter the user code and the APP password.

3. Tap Finish.

11.3.4 Control Areas (Partitions)

For a Pyronix control panel, an area (partition) is an independent control system of a security control panel. It allows you to batch arm/disarm all zones in it. If the security control panel has two partitions, you have two independent systems for arming or disarming.

Before You Start

- Add the Pyronix control panel to the Mobile Client. See Add Pyronix Control Panel to Mobile Client for details.
- Authorize your account of the Mobile Client to access the device. See Authorize Mobile Client Account via PyronixCloud for details.

Steps

```
i Note
```

For more information about partition, see the user manual of the security control panel.

^{1.} Tap the Pyronix control panel on the device list page and verify the device to enter the Area (Partition) page.

🚺 Note

For details about verifying device and authorize the phone, see Verify Pyronix Control Panel.

The alarm outputs and areas (partitions) will be displayed on the page.

← Device 01			¢		
Cellar	Gate	Key	(o o o More		
Area A Arming					
Input 01te ⊗Offline	st		ţŷ}

Input 02 ⊗Offline			ŝ		
Area C Disarmed			\bigcirc		
Input 01te ⊗Offline	st		ŝ		

Figure 11-9 Area (Partition) Page

2. Set the switch to ON to arm the area (partition).

11.3.5 Control Alarm Output Remotely

When the Pyronix control panel is connected with alarm outputs, such as siren and alarm lamp, you can control the alarm output status.

Before You Start

Connect an alarm output to the Pyronix control panel. For details, see the user manual of the device.

Steps

 Tap a Pyronix control panel on the device list page and verify the device to enter the Area (Partition) page.

i Note

For details about verifying device and authorizing the phone, see *Verify Pyronix Control Panel*.

The alarm output(s) and all areas (partitions) will be listed on the page.

2. Tap 🖂 to enter the Alarm Output page.

Tap the alarm output icon to trigger an alarm.
 The time for outputting the alarm starts count down.

i Note

The time for outputting the alarm varies with different types of alarm outputs.

11.3.6 Bypass a Zone

If you bypass a zone, the zone will NOT be in alert condition (related alarm will not be triggered and related faults will not be detected) even when the area (or partition) is armed. Bypassing a zone is usually used in the following two scenarios. The first is that if a zone is faulty, other zones of the same area (or partition) can be armed only when the faulty zone is bypassed. The second is that you simply want a specific zone NOT to trigger alarms in special occasions.

Select a zone on the Area page and tap ⁽⁽⁾/₍₎ to enter the Settings page of the zone, and then enable zone bypass.

For details about how to enter the Area page, see **Control Areas** (Partitions).

12 Alarm Notification

Notifications about events triggered on the devices can be pushed to the Mobile Client if you enable the function. You can also check the event information on the Mobile Client and filter the information.

12.1 Enable/Disable Alarm Notification

You can enable alarm notification on the Settings page of a device to allow the Mobile Client to receive alarm notifications if alarm events are triggered on the device. If you don't want the Mobile Client to receive alarm notifications all the time, you can set a notification schedule to define specific time period(s) for receiving the alarm notifications.

Before You Start

You should have configured event settings on device (except for the video intercom device). See the user manual of the device for details.

Steps

	Note

- The Mobile Client will ignore alarm events triggered out of the time period defined by the notification schedule.
- The security control panel does not support setting notification schedule.
- 1. Enter the Settings page of the device.
 - On the device list page, if the list is displayed in list mode, swipe the device to the left and then tap 🕲 .
 - On the device list page, if the list is displayed in thumbnail mode, swipe the device to the left and then tap

- On the Live View page of the device, tap •••• and then tap **Settings**.
- 2. Tap Alarm Notification to enter the Alarm Notification page.

Alarm Notificatio	n
Alarm Notification	OFF
Notification Schedule	
Notification Schedule	>
When enabled, the device will turn push notification on / off accordin scheduled settings.	

Figure 12-1 Alarm Notification Page

- **3.** Set the Alarm Notification switch to ON to enable Alarm Notification.
- 4. Optional: Set a notification schedule.
 - 1) Set the Notification Schedule switch to ON to enable Notification Schedule.
 - 2) Tap **Notification Schedule** under the switch to enter the Notification Schedule page.

Figure 12-2 Notification Schedule Page

- 3) Select a day in a week for setting the notification schedule.
- 4) Tap Set a Time Schedule.
- 5) Tap Start Time and End Time to set the start time point and end time point.
- 6) Optional: Tap Repeat and then select a day in a week to copy the time settings to the day.
- 7) Tap 🔽 to confirm the settings.
- **5. Optional:** Perform the following operations after setting the notification schedule.

Delete Time	Swipe a time period to the left and then
Period	tap Delete .

Edit Time Period Tap a time period to edit it.

Tap Notification Sound Mode to set the sound mode for the notification.

i Note

The function should be supported by the device. Skip this step if the device doesn't support it.

12.2 Set Motion Detection Alarm for Wi-Fi Doorbell

Motion detection is a way of detecting motion in a surveillance scene by analyzing image data and differences in a series of images. This section introduces how to draw motion detection area and set motion detection area for Wi-Fi doorbell.

Steps

i Note

You should have added a Wi-Fi doorbell to the Mobile Client. See Add Device for Management for details.

- 1. Enter the Settings page of the Wi-Fi doorbell.
 - On the device list page, if the list is displayed in list mode, swipe the name of a Wi-Fi doorbell to the left and then tap
 .
 - On the device list page, if the list is displayed in thumbnail mode, swipe the name of Wi-Fi doorbell to the left and then tap ***.
 - On the Live View page of the device, tap •••• and then tap Settings.
- 2. Tap Alarm Notification to enter the Alarm Notification page.
- 3. Draw motion detection area.
 - 1) Tap **Draw Motion Detection Area** to enter the Motion Detection Area page.

Figure 12-3 Draw Motion Detection Area

- Tap the grid(s) on the live video image to select the motion detection area.
- Tap 🗮 to save the settings.
- Tap Motion Detection Sensitivity on the Alarm Notification page and then drag the slider to adjust the sensitivity. Low

Moving persons, large moving pets, and any other large moving objects in the motion detection area will trigger the alarm, while smaller objects will not.

Medium

Moving small pets and any other medium-sized moving objects in the motion detection area will trigger the alarm, while smaller objects will not.

High

Moving insects, moving leaves, and any other larger objects will trigger the alarm.

What to do next

Go back to Alarm Notification page and enable alarm notification function.

i Note

For details about how to enabling alarm notification, see Enable/ Disable Alarm Notification

12.3 Check Event Information or Call Logs

You can check the alarm event information on the Notification page when alarms are triggered on the devices. You can also check the call log generated from the video intercom devices.

Before You Start

- Configure alarm event for the device and arm the device. For details, see the user manual of the device.
- For indoor station, it should have been linked to the sensor. For details, see the user manual of the video intercom device.

Steps

i Note

Since the operations for checking event information and call log are similar, here we only introduce how to check event information.

- 1. Tap Notification → Alarm Event to enter the Alarm Event page.
- Optional: Tap Filter and then select a date and (or) select a device to filter the events.
- Tap an event to enter the details page and check the details of the alarm event.

Zoom in/out Event- related Picture	Spread two fingers apart to zoom in the picture and pinch them together to zoom out, or double-tap the picture to zoom in or zoom out.
	If you have enabled Video and Image Encryption for the device, you should enter the device verification code before you can view the picture. For details about Video and Image Encryption, see Set Video and Image Encryption for details.
Save Event- related Picture	Tap $\blacksquare \rightarrow$ Save Picture to save the picture to the Photo Album of the phone.
	You should have configured the event linkage action for capturing event-related picture for the device. See the user manual of the device for details.
View Event- related Video Footage	Tap Playback to view the video footage.

4. Optional: Go back to the Notification page and then edit the event information.

Mark All Events as Read	Tap Edit on the Notification page and then tap Mark as All Read to mark all event information as "already read".
Mark a Specific Event as Read	Tap Edit on the Notification page and select an event, ans then tap Mark as Read to mark the selected event information as "already read".
Clear All Events	Tap Edit on the Notification page and then tap Clear All .
Delete a Specific Event	Tap Edit on the Notification page and select an event, ans then tap Delete to delete it.

13 Answer Call from Indoor Station

If no one answers the call via the indoor station for a while, the call will be forwarded to the Mobile Client. You can answer the call, view the live video of the door station, as well as open the door.

Before You Start

You should have added an video intercom device to the Mobile Client. See *Add Device for Management* for details.

Steps

Note
11010

Up to 6 users can view the live video of the same door station at the same time. If there's already been 6 users viewing the live video, you can only use the audio function of the video intercom device.

1. Tap the call message to enter the following page.

Call from 1-1-1

2. Perform the following operations.

Answer the Call	Tap 🕙 to answer the call.	
Stop/Restart Live View	Tap 🗖 to stop the live view. And tap 🖻 to restart it.	
Mute	Tap 💶 to mute the live video.	
Open Door	Tap 💽 to open the door.	
Digital Zoom	Pinch two fingers together to zoom in the live video image, and spread them apart to zoom out.	

14 Other Functions

This section introduces other functions provided by the Mobile Client, including Touch ID (or Face ID) authentication, and management of the recorded (or clipped) video and captured pictures.

14.1 Pictures and Videos

In Picture and Video Management module, you can view and mange the recorded (or clipped) video footage and the captured pictures.

Tap More \rightarrow Pictures and Videos to enter the Pictures and Videos page and then you can perform the following operations.

- Play Video File: Tap a video file and then tap D to play it.
- Save to Local Album: Tap a video file or a picture, and then tap
 If to save the video file or picture to the album of the your
 phone.
- Delete a Video File or Picture: Tap a video file or a picture, and then tap to delete it.
- Share a Picture or Video File to Another Application: Tap a video file or a picture, and then tap to share it to another application.
- Batch Delete Video Files and (or) Pictures: Tap Edit and select video files and (or) pictures, and then tap to delete them.
- Batch Share Pictures and (or) Video Files to Another Application: Tap Edit and select pictures and (or) video files, and then tap S to share it to another application.

14.2 Touch ID (or Face ID) Authentication

For information security, the Mobile Client provides the function of Touch ID (or Face ID) authentication, which requires you to verify your identity before you can access it.

i Note

- The phone operation system should support Touch ID (or Face ID) authentication.
- You should have enabled Touch ID (or Face ID) authentication on the phone operation system, or you will fail to enable the function on the client software.

Tap **More** \rightarrow **Account Management** to enter the Account Management page and then enable the function.

15 System Settings

This section introduces system settings of the Mobile Client, including hardware decoding, floating live view, resuming latest live view, etc.

15.1 Message Push Notification

If the function is enabled, the Mobile Client will push alarm notifications related to the added devices to you.

i Note

For details about alarm notifications, see *Alarm Notification* for details.

Tap More \rightarrow Settings to enter the Settings page, and then enable the function.

15.2 Save Device Parameters

If the function is enabled, the Mobile Client will remember the device parameters you set. Take video and image encryption for an example, you only need to enter the device verification code for once to view the encrypted live view, playback, or picture.

i Note

- For details about video and image encryption, see Set Video and Image Encryption.
- For details about setting device parameters via the Mobile Client, see *Device Settings*.

Tap More \rightarrow Settings to enter the Settings page, and then enable the function.

15.3 Auto-receive Alarm after Power-on

If you enable this function, the Mobile Client will run automatically and receive alarm event information when the phone is powered on.

Tap More \rightarrow Settings to enter the Settings page and then enable the function.

i Note

The power consumption of the phone may increase.

15.4 Generate a QR Code with Device Information

For devices added via IP/domain, the Mobile Client allows you to generate a QR code containing the information of up to 32 devices. The QR code can be used to quickly add multiple devices. For example, if user A has generated a QR code containing the information of 10 devices, user B can scan the QR code to batch add the 10 devices to his or her account.

Steps

```
i Note
```

Only devices added by IP/domain support this function.

1. Tap More → Settings to enter the Settings page.

- 2. Tap Generate QR Code.
- Tap Generate QR Code in the IP/Domain field to enter the Select Device page.
- 4. Select device(s).
- 5. Tap Generate QR Code.

The QR code picture will be generated.

6. Tap Save to save the picture to the photo album of your phone.

15.5 Hardware Decoding

Hardware decoding provides better decoding performance and lower CPU usage when you play high definition videos during live view or playback.

Tap More \rightarrow Settings to enter the Settings page, and then enable the function.

i Note

- The function is available only when the phone OS is iOS 8.0 or later version.
- Hardware decoding is only supported when the resolution is 704*576, 704*480, 640*480, 1024*768, 1280*720, 1280*960, 1920*1080, 2048*1536, or 2560*1920. For other resolutions, only software decoding is supported.
- For H.265 video compression, hardware decoding is not supported.
- Hardware decoding should be supported by the device. If not, the device will adopt software decoding by default.

15.6 View Traffic Statistics

The Mobile Client automatically calculates the network traffic consumed during live view and playback. You can check the mobile network traffic and Wi-Fi network traffic separately.

Tap More \rightarrow Settings to enter the Settings page, and then tap Traffic Statistics.

15.7 Generate a QR Code with Wi-Fi Information

You can generate a QR code with Wi-Fi information, and then use a network camera or wireless doorbell to scan the QR code to connect the device to the Wi-Fi network.

Steps

```
i Note
```

Connecting device to a Wi-Fi network by scanning QR code should be supported by the device.

- 1. Tap More → Settings to enter the Settings page.
- 2. Tap Wi-Fi Settings to enter the Wi-Fi Settings page.
- 3. Set the required information.

Wi-Fi Name

Enter the SSID of the Wi-Fi network.

Password

Enter the password of the Wi-Fi network.

Encryption

Select the encryption type as the one you set for the router.

i Note

If you select NONE as the encryption type, the password of the Wi-Fi network is not required.

4. Tap Generate to generate a QR code for the Wi-Fi network.

What to do next

Use a network camera or wireless doorbell to scan the QR code to connect the device to the Wi-Fi network.

15.8 Floating Live View

If you enable this function, floating live view window(s) will be displayed on the device list page when you select one or more device(s). You can preview the live video(s) in the floating window(s).

i Note

- If you select more than 16 cameras, the number of the selected cameras will be displayed.
- Up to 256 cameras can be displayed as floating windows.

Tap **More** \rightarrow **Settings** to enter the Settings page and then enable the function.

15.9 Resume Latest Live View

If you enable the function, the latest live view will be resumed each time you enter the Mobile Client. The window division mode, and the live view windows' sequence (if in multiplewindow mode) will also be restored.

Tap More \rightarrow Settings to enter the Settings page, and then enable the function.

15.10 Tablet Mode

If the Mobile Client is installed on a tablet, you can enable tablet mode so that the interfaces will be displayed in landscape mode by default.

Tap More \rightarrow Settings to enter the Settings page and then enable the function.

15.11 Display/Hide Channel-Zero

Channel-zero, known as virtual channel, can show the videos from all channels of the device, reducing the bandwidth while simultaneously previewing from multi-channel. It can acquire image information and save bandwidth for transmission through encoding and configuring output images.

Tap More → Settings and then enable the Mobile Client to display channel-zero.

15.12 Auto-Download Upgrade File

If you enable Auto-Donwload Upgrade File, the Mobile Client will automatically download the upgrade file in Wi-Fi networks, which helps speed up the device upgrade process.

i Note

For details about upgrading device, see Upgrade Device Firmware.

Tap More → Settings to enter the Settin	gs page and then enable
the function.	

16 How to Reset Password of DVR or NVR via the Mobile Client

If you forgot the admin password of a DVR or NVR, you can reset the password by scanning the QR code generated on the local GUI of the device.

The flow chart of the password resetting process is shown below.

Figure 16-1 Flow Chart

16.1 Reserve Email Address for Resetting Password

You should have reserved email address for resetting the admin password of NVR or DVR if you want to change the password by scanning QR code.

Before You Start

- Upgrade the firmware of the NVR or DVR to make the device support self-service password reset.
- If the device is inactivated, check Reserved Email Settings when activate it. For details about activating NVR or DVR, see the user manual of the device.

Steps

i Note

The DVR or NVR should support the function.

- 1. Go to Configuration → User on the local GUI of the device.
- 2. Select admin user and then click Edit.
- 3. Enter the password of the device in the Old Password field.
- 4. Click the Settings icon in Reserved E-mail Settings field.
- 5. Enter an email address for receiving verification code, and then click OK.

16.2 Generate QR Code on Device Local GUI

If you forgot the admin password of the DVR or NVR, you can generate a QR code on the device's local GUI and then scan the QR code via the Mobile Client to reset the admin password.

Before You Start

You should have reserved an email address for resetting password.

Steps

	٠	
		Note
$ \neg$	5	note

The DVR or NVR should support this function.

- 1. On the login page of the device's local GUI, click Forgot Password.
- 2. Select Verify by Reserved Email and then click OK.
- Read and agree the Legal Disclaimer, and click OK to continue. The QR code for resetting password pops up.

16.3 Reset Password of DVR/NVR by Scanning QR Code

If you forgot the admin password of DVR or NVR, you can reset the password by scanning the QR code generated on the local GUI of the device.

Before You Start

- You should have allowed the Mobile Client to access your phone's camera.
- You should have reserved email address for resetting device password and generated QR code on the device's local GUI. For details, see *Reserve Email Address for Resetting Password* and *Generate QR Code on Device Local GUI* for details.

Steps

- Tap More → Reset Device Password to enter the Reset Device Password page.
- Scan the QR code on the local GUI of the DVR or NVR. A verification code will be sent to the reserved email address.

i Note

- The verification code will be valid for 48 hours.
- If you reboot the device or change the reserved email address, the verification code would be invalid.

- 3. Go to the device's local GUI.
- Enter the received verification code on the Verify by Reserved Email window and then click OK to continue.
- 5. Create a new password and then confirm the password.
